critical task also involves analyzing research in both philosophy and psychology that is taken to show that conscious control and explicit monitoring of one's movements impedes well practiced skills She explores a wide range of real life examples of optimal performance culled from sports the performing arts chess nursing medicine the military and elsewhere and draws from psychology neuroscience and literature to offer a refreshing and persuasive view of expertise according to which expert action generally is and ought to be thoughtful effortful and reflective

**Emerging Curriculum** Andrew J.C. Begg,2008-01-01 An important contribution that Emerging curriculum makes is a reconceptualizing of the curriculum development process This moves development thinking from the traditional research development dissemination model to one that acknowledges the interrelatedness of many influences on curriculum the multi layered nature of curriculum and the complexity of the educational system in which curriculum exists Indeed the educational system is envisaged as a complex living system The study is autobiographical it is based on a lifetime spent in education during which the author had a particular interest in curriculum and the associated development processes and how one s ideas about these change over time Emerging curriculum has been successfully submitted as a PhD thesis but was written as a book for a wider audience than the traditional thesis one It shows by example how reflection on one s work throughout one s career can be considered as research and can contribute to knowledge in a similar way to that of more traditional doctoral research projects It is hoped that teachers reading this will relate to the author s experiences in schools and will see themselves significant contributors to curriculum that curriculum developers will be provoked into considering alternative ways of working and that academics might move curriculum theorising closer to the reality of schools
