A Decision Framework for Managing the Spirit Lake and Toutle River System at Mount St. Helens National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Division on Earth and Life Studies, Water Science and Technology Board, Board on Earth Sciences and Resources, Committee on Geological and Geotechnical Engineering, Committee on Long-Term Management of the Spirit Lake/Toutle River System in Southwest Washington, 2018-03-29 The 1980 eruption of Mount St Helens in southwest Washington State radically changed the physical and socio economic landscapes of the region The eruption destroyed the summit of the volcano sending large amounts of debris into the North Fork Toutle River and blocking the sole means of drainage from Spirit Lake 4 miles north of Mount St Helens As a result of the blockage rising lake levels could cause failure of the debris blockage putting the downstream population of approximately 50 000 at risk of catastrophic flooding and mud flows Further continued transport of sediment to the river from volcanic debris deposits surrounding the mountain reduces the flood carrying capacity of downstream river channels and leaves the population vulnerable to chronic flooding The legacy of the 1980 eruption and the prospect of future volcanic seismic and flood events mean that risk management in the Spirit Lake Toutle River system will be challenging for decades to come This report offers a decision framework to support the long term management of risks related to the Spirit Lake and Toutle River system in light of the different regional economic cultural and social priorities and the respective roles of federal tribal state and local authorities as well as other entities and groups in the region It also considers the history and adequacy of characterization monitoring and management associated with the Spirit Lake debris blockage and outflow tunnel other efforts to control transport of
