

- **MAXOWNERS of MR:** The MAXOWNERS parameter of the Master Recipe specifies the number of Control Recipes that can be executed simultaneously against a Master Recipe. The value configured here becomes the default value for the applicable blocks. You cannot execute more than 20 Control Recipes simultaneously for a Master Recipe. The range for this parameter is 1 to 20 and the default value of is 4.

For example, if you specify MAXOWNERS of MR as 10, you can run up to 10 Control Recipes simultaneously for the Master Recipe. If you attempt to run more than 10 Control Recipes, the additional Control Recipes are queued up and are executed only if any of the Control Recipes in the owner list completes the execution.

Reconfiguration affects only the Master Recipes that are created after this change is made. It does not affect already created Master Recipes.

- **Cluster ID:** This parameter specifies a unique identifier for each cluster that is participating in inter-cluster peer-to-peer communication. The **Cluster ID** must be manually configured from the **Batch Preferences** tab. The **Cluster ID** is auto-generated when the **Batch Preferences** is configured.

ATTENTION

When there is a change in the **Cluster ID**, the controller must be reloaded.

- **Automatically Generate Batch ID:** This parameter specifies the option for automatically creating Batch ID for batches. By default, this option is enabled.

When this option is enabled, the Batch ID is created automatically. The automatically generated Batch ID contains a part of the activity ID. For example, if the activity ID is **SACTIVITY_990116D9181701CB**, the Batch ID is **990116D9181701CB**.
