Their cosmopolitan scope includes chapters on tropical and temperate zone species written by scientists from several continents. The influence of environmental factors such as irradiance temperature water and salinity on plant physiology and on vegetative and reproductive growth is comprehensively discussed for each crop. In addition to being a thorough and up to date set of textbooks the organization of the two volumes makes them an excellent reference tool. Each chapter focuses on a single crop or a group of genetically or horticulturally related crop and is appropriately divided into subsections that address individual environmental factors.
