Recent Advances in Immunology to Target Cancer, Inflammation and Infections Jagat Kanwar, 2012-05-09

Immunology is the branch of biomedical sciences to study of the immune system physiology both in healthy and diseased states Some aspects of autoimmunity draws our attention to the fact that it is not always associated with pathology For instance autoimmune reactions are highly useful in clearing off the excess unwanted or aged tissues from the body Also generation of autoimmunity occurs after the exposure to the non self antigen that is structurally similar to the self aided by the stimulatory molecules like the cytokines Thus a narrow margin differentiates immunity from auto immunity as already discussed Hence finding answers for how the physiologic immunity turns to pathologic autoimmunity always remains a question of intense interest However this margin could be cut down only if the physiology of the immune system is better understood The individual chapters included in this book will cover all the possible aspects of immunology and pathologies associated with it The authors have taken strenuous effort in elaborating the concepts that are lucid and will be of reader s interest
