Resources in Education ,1997 *The Language of Science Education* William F. McComas,2013-12-30 The Language of Science Education An Expanded Glossary of Key Terms and Concepts in Science Teaching and Learning is written expressly for science education professionals and students of science education to provide the foundation for a shared vocabulary of the field of science teaching and learning Science education is a part of education studies but has developed a unique vocabulary that is occasionally at odds with the ways some terms are commonly used both in the field of education and in general conversation Therefore understanding the specific way that terms are used within science education is vital for those who wish to understand the existing literature or make contributions to it The Language of Science Education provides definitions for 100 unique terms but when considering the related terms that are also defined as they relate to the targeted words almost 150 words are represented in the book For instance laboratory instruction is accompanied by definitions for openness wet lab dry lab virtual lab and cookbook lab Each key term is defined both with a short entry designed to provide immediate access following by a more extensive discussion with extensive references and examples where appropriate Experienced readers will recognize the majority of terms included but the developing discipline of science education demands the consideration of new words For example the term blended science is offered as a better descriptor for interdisciplinary science and make a distinction between project based and problem based instruction Even a definition for science education is included The Language of Science Education is designed as a reference book but many readers may find it useful and enlightening to read it as if it were a series of very short stories **Biology Digest** ,1987 DeepAesthetics

Anna Munster, 2025-03-31 Computation has now been reconfigured by machine learning those technical processes and operations that yoke together statistics and computer science to create artificial intelligence AI by furnishing vast datasets to learn tasks and predict outcomes In DeepAesthetics Anna Munster examines the range of more than human experiences this transformation has engendered and considers how those experiences can be qualitative as well as quantitative Drawing on process philosophy Munster approaches computational experience through its relations and operations She combines deep learning the subfield of machine learning that uses neural network architectures and aesthetics to offer a way to understand the insensible and frequently imperceptible forms of nonlinear and continuously modulating statistical function Attending to the domains and operations of image production statistical racialization AI conversational agents and critical AI art Munster analyzes how machine learning is operationally entangled with racialized neurotypical and cognitivist modes of producing knowledge and experience She approaches machine learning as events through which a different sensibility registers one in which AI is populated by oddness disjunctions and surprises and where artful engagement with machine learning fosters indeterminate futures
