

When switch is turned "ON" preparatory to starting engine, both lights should go "ON." (Exception: When switch is turned "ON," immediately after engine has been primed by cranking, red oil pressure signal may not light, but will light after a few seconds. This is due to oil pressure built up by cranking, and is most likely to be noticed in cold weather.)

With engine running, both lights should go "OFF." See "Instrument Panel Signal Lights," Page 12.
