contributions have had a major impact on defining the field of atomic physics as it exists today His ground breaking research has included precision laser spectroscopy using lasers and atoms to provide important table top tests of theories of elementary particle physics the development of techniques to cool and trap atoms using laser light particularly in inventing much simpler less expensive ways to do this the understanding of how atoms interact with one another and light at ultracold temperatures and the creation of the first Bose Einstein condensation in a dilute gas and the study of the properties of this condensate In recent years he has also turned his attention to physics education and new methods and research in that area This indispensable volume presents his collected papers with annotations from the author tracing his fascinating research path and providing valuable insight about the significance of the works      *Proof* Adam Kucharski, 2025-05-06 An award winning mathematician he made me smile and made me feel clever Peter Frankopan shows how we prove what's true and what to do when we can't How do we establish what we believe And how can we be certain that what we believe is true And how do we convince other people that it is true For thousands of years from the ancient Greeks to the Arabic golden age to the modern world science has used different methods logical empirical intuitive and more to separate fact from fiction But it all had the same goal find perfect evidence and be rewarded with universal truth As mathematician Adam Kucharski shows however there is far more to proof than axioms theories and laws when demonstrating that a new medical treatment works persuading a jury of someone's guilt or deciding whether you trust a self driving car the weighing up of evidence is far from simple To discover proof we must reach into a thicket of errors and biases and embrace uncertainty and never more so than when existing methods fail Spanning mathematics science politics philosophy and economics this book offers the ultimate exploration of how we can find our way to proof and just as importantly of how to go forward when supposed facts falter
