Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free **Computational Econometrics** Charles G.

Renfro, 2004 This publication contains a substantial amount of detail about the broad history of the development of econometric software based on the personal recollections of many people For economists the computer has increasingly become the primary applied research tool and it is software that makes the computer work **Computer-Aided Multivariate Analysis, Fourth Edition** Abdelmonem Afifi, Susanne May, Virginia A. Clark, 2003-12-29 Computer Aided Multivariate Analysis Fourth Edition enables researchers and students with limited mathematical backgrounds to understand the concepts underlying multivariate statistical analysis perform analysis using statistical packages and understand the output New topics include Loess and Poisson regression nominal and ordinal logistic regression interpretation of interactions in logistic and survival analysis and imputation for missing values This book includes new exercises and references and updated options in the latest versions of the statistical packages All data sets and codebooks are available for download The authors explain the assumptions made in performing each analysis and test how to determine if your data meets those assumptions and what to do if they do not What to Watch out for sections in each chapter warn of common difficulties By reading this text you will know what method to use with your data set how to get the results and how to interpret them and explain them to others New in the Fourth Edition Expanded explanation of checking for goodness of fit in logistic regression

and survival analysis Kaplan Meier estimates of survival curves formal tests for comparing survival between groups interactions and the use of time dependent covariates in survival analysis Expanded discussion of how to handle missing values Latest features of the S PLUS package in addition to SAS SPSS STATA and STATISTICA for multivariate analysis Data sets for the problems are available at the CRC web site <http://www.crcpress.com/product/isbn/9781584883081> Commands and output for examples used in the text for each statistical package are available at the UCLA web site <http://www.ats.ucla.edu/stat/examples/cama4>
