Complex Optical Components Ekkard Brinksmeier, Olthmann Riemer, Ralf M. Gläbe, 2012-09-13 High quality optical components for consumer products made of glass and plastic are mostly fabricated by replication. This highly developed production technology requires several consecutive well matched processing steps called a process chain covering all steps from mold design, advanced machining, and coating of molds up to the actual replication and final precision measurement of the quality of the optical components. Current market demands for leading edge optical applications require high precision and cost effective parts in large volumes. For meeting these demands, it is necessary to develop high quality process chains and moreover to crosslink all demands and interdependencies within these process chains. The Transregional Collaborative Research Center Process chains for the replication of complex optical elements at Bremen, Aachen, and Stillwater worked extensively and thoroughly in this field from 2001 to 2012. This volume will present the latest scientific results for the complete process chain, giving a profound insight into present day high tech production.
