Sakthivel-Wainford,2011 Today many radiographers are trained to report on trauma radiographs Universities are also training student radiographers to comment on trauma radiographs It is useful in some cases essential that whilst we review the trauma radiograph we also recognise and note any appropriate pathology For instance a patient attends Accident and Emergency with pain in their knee for several weeks following trauma the radiographs show no fracture but some signs of a malignant bony tumour which on further investigation is an osteo sarcoma As with the other books in the series this book starts with several chapters by different authors followed by a series of 100 cases Self assessment in Musculoskeletal Pathology X rays will appear to a variety of health professions and like others in the series is intended to accompany a reporting course and to be used alongside further research and reading **Self Assessment in Axial Skeleton**

Musculoskeletal Trauma X-rays Karen Sakthivel-Wainford,2009 Many practitioners are now continuing to expand their reporting skills from appendicular skeleton to include the axial skeleton in trauma Other allied profession may also be reviewing axial skeleton trauma radiographs for instance nurse practitioners such as in cases of hip trauma Many practitioners initially fear reviewing axial skeleton radiographs understandably as missing an injury may have dire consequences but with training audit and care this fear can be overcome and one can look forward to the challenge of axial radiograph reporting As axial trauma radiographs can be a difficult to review the book starts with several chapters to introduce or revise specific axial trauma The first chapter discusses mechanisms of injury of major trauma Followed by a chapter on pelvic trauma The next chapter looks at reviewing trauma cervical spine radiographs Then is presented a series of trauma cases of the axial skeleton on which you are asked to write reports plus sometimes answer a few questions the answers are over the page This section is divided into six chapters trauma cases of the pelvis of the hip and femur the cervical spine dorsal and lumbar spine the skull facial bones and mandible 15 cases in each chapter the last chapter being 25

mixed cases Although it is preferably to work your way through the book from start to finish if you feel you need revision on say cervical spine radiographs then you can flick to the chapter on reviewing the cervical spine and next to the cases on cervical spine Each case has appropriate clinical history although this may not be the original history in order to anonymous the case Some of the cases may not have side markers these may have been removed whilst removing patients OCO details
