Masonry Structures: Between Mechanics and Architecture Danila Aita, Orietta Pedemonte, Kim Williams, 2015-11-02
The book aims to provide an overview of the state of the art on the mechanics of arches and masonry structures. It is addressed to an international audience arising from the international context in which the Associazione Edoardo Benvenuto has carried out its activities in recent years under the honorary presidency of Jacques Heyman. The book belongs to the collection *Between Mechanics and Architecture* born in 1995 from the collaboration of several renowned scholars including Edoardo Benvenuto, P. Radelet de Grave, E. Benvenuto, eds. *Entre Mécanique et Architecture*. Between Mechanics and Architecture. Birkhäuser Basel, 1995. **Between Mechanics and Architecture** Patricia Radelet-de Grave, 2025-01-31. This collection of essays reflects the author's decades-long dedication to studying the interplay between mechanics and architecture. It explores how advancements in mechanics have influenced architectural innovation and how the need for new architectural solutions has driven theoretical progress in engineering. By examining the historical roots of these fields, these essays provide a deep analysis of key developments. This interdisciplinary work will appeal to scholars, students, and anyone interested in the complex relationship between the theoretical and practical aspects of architecture and civil engineering.

Structures and Architecture Paulo J. Cruz, 2016-10-14. Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process, exploiting together new concepts, applications, and challenges. This set of book of abstracts and full paper searchable CD-ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho, Guimarães, Portugal, July 2016, to promote the synergy in the collaboration between the disciplines of architecture and structural engineering. **The History of the Theory of Structures** Karl-Eugen Kurrer, 2018-06-19. Zehn Jahre nach der 1. Auflage in englischer Sprache legt der Autor sein Buch *The History of the Theory of Structures* in wesentlich erweiterter Form vor, nunmehr mit dem Untertitel *Searching for Equilibrium*. Mit dem vorliegenden Buch lädt der Verfasser seine Leser zur Suche nach dem Gleichgewicht von Tragwerken auf Zeitreisen ein. Die Zeitreisen setzen mit der Entstehung der Statik und Festigkeitslehre eines Leonardo und Galilei ein und erreichen ihren ersten Höhepunkt mit den baustatischen Theorien über den Balken, Erddruck und das Gewicht von Coulomb am Ende des 18. Jahrhunderts. Im folgenden Jahrhundert formiert sich die Baustatik mit Navier, Culmann, Maxwell, Rankine, Mohr, Castigliano und Müller-Breslau zu einer technikwissenschaftlichen Grundlagendisziplin, die im 20. Jahrhundert in Gestalt der modernen Strukturmechanik bei der Herausbildung der konstruktiven Sprache des Stahl, Stahlbeton, Flugzeug, Automobil und des Schiffbaus eine tragende Rolle spielt. Dabei setzt der Autor den inhaltlichen Schwerpunkt auf die

Formierung und Entwicklung moderner numerischer Ingenieurmethoden wie der Finite Elemente Methode und beschreibt ihre disziplinäre Integration in der Computational Mechanics. Kurze durch historische Skizzen unterstützte Einblicke in gängige Berechnungsverfahren erleichtern den Zugang zur Geschichte der Strukturmechanik und Erddrucktheorie vom heutigen Stand der Ingenieurpraxis und stellen einen auch einen wichtigen Beitrag zur Ingenieurpädagogik dar. Dem Autor gelingt es, die Unterschiedlichkeit der Akteure hinsichtlich ihres technisch-wissenschaftlichen Profils und ihrer Persönlichkeit plastisch zu schildern und das Verständnis für den gesellschaftlichen Kontext zu erzeugen. So werden in 260 Kurzbiografien die subjektive Dimension der Baustatik und der Strukturmechanik von der frühen Neuzeit bis heute entfaltet. Dabei werden die wesentlichen Beiträge der Protagonisten der Baustatik besprochen und in die nachfolgende Bibliografie integriert. Berücksichtigt wurden nicht nur Bauingenieure und Architekten, sondern auch Mathematiker, Physiker, Maschinenbauer sowie Flugzeug- und Schiffbauer. Neben den bekannten Persönlichkeiten der Baustatik wie Coulomb, Culmann, Maxwell, Mohr, Müller-Breslau, Navier, Rankine, Saint Venant, Timoshenko und Westergaard wurden u.a. auch G. Green, A. N. Krylov, G. Li, A. J. S. Pippard, W. Prager, H. A. Schade, A. W. Skempton, C. A. Truesdell, J. A. L. Waddell und H. Wagner berücksichtigt. Den Wegbereitern der Moderne in der Baustatik J. H. Argyris, R. W. Clough, Th. v. Kärman, M. J. Turner und O. C. Zienkiewicz wurden umfangreiche Biografien gewidmet. Eine ca. 4500 Titel umfassende Bibliografie rundet das Werk ab. Neue Inhalte der 2. Auflage sind: Erddrucktheorie, Traglastverfahren, historische Lehrbuchanalyse, Stahlbrückenbau, Leichtbau, Platten und Schalentheorie, Greensche Funktion, Computerstatik, FEM, Computergestützte Graphostatik und Historische Technikwissenschaft. Gegenüber der 1. englischen Ausgabe wurde der Seitenumfang um 50 % auf nunmehr etwas über 1200 Druckseiten gesteigert. Das vorliegende Buch ist die erste zusammenfassende historische Gesamtdarstellung der Baustatik vom 16. Jahrhundert bis heute. Über die Reihe „edition Bautechnikgeschichte“: Mit erstaunlicher Dynamik hat sich die Bautechnikgeschichte in den vergangenen Jahrzehnten zu einer höchst lebendigen, international vernetzten und viel beachteten eigenständigen Disziplin entwickelt. Auch wenn die nationalen Forschungszugänge unterschiedliche Akzente setzen, eint sie doch das Bewusstsein, dass gerade die inhaltliche und methodische Vielfalt und das damit verbundene synthetische Potenzial die Stärke des neuen Forschungsfeldes ausmachen. Bautechnikgeschichte erschließt neue Formen des Verstehens von Bauen zwischen Ingenieurwesen und Architektur, zwischen Bau und Kunst, Technik und Wissenschaftsgeschichte. Mit der „edition Bautechnikgeschichte“ erhält die neue Disziplin erstmals einen Ort für die Publikation wichtiger Arbeiten auf angemessenem Niveau in hochwertiger Gestaltung. Die Bücher erscheinen in deutscher oder englischer Sprache. Beide Hauptrichtungen der Bautechnikgeschichte, der eher konstruktionsgeschichtlich und der eher theoriegeschichtlich geleitete Zugang, finden Berücksichtigung. Das Spektrum der Bände reicht von Überblickswerken über Monographien zu Einzelaspekten oder Bauten bis hin zu Biographien bedeutender Ingenieurpersönlichkeiten. Ein international besetzter wissenschaftlicher Beirat unterstützt die Herausgeber in der Umsetzung des Konzepts.

Discrete Computational Mechanics of Masonry Structures Katalin

Bagi, Maurizio Angelillo, 2023-09-02 This book provides an overview to those most important modern and traditional methods of masonry analysis that are able to capture the discrete internal built up of masonry structures Such methods are available in a wide variety today from computational packages based on classical graphical statics techniques through discrete element methods or the most sophisticated no tension semi continuum models and this book reviews their theoretical foundations as well as their advantages and preferable fields of application also calling the attention on their limitations so that the reader could build up a critical view of the choices they have when attacking a masonry mechanics problem The book gives a basis for the readers to become able to develop their own methods inspired either by classical graphical statics or by any modern technique they find promising Statics of Historic Masonry Constructions Mario Como, 2017-07-05

Masonry constructions are the great majority of the buildings in Europe s historic centres and the most important monuments of its architectural heritage Given the age of these constructions the demand for safety assessments and restoration projects is pressing and constant still within the broad studies in the subject it is not yet recognised in particular within the seismic area a unitary approach to deal with Masonry structures This successful book contributes to clarify the issues with a rigorous approach offering a comprehensive new Statics of Masonry Constructions This third edition has been driven by some recent developments of the research in the field and it gives the fundamentals of Statics with an original and rigorous mathematical formulation further in depth inquired in this new version With many refinements and improvements the book investigates the static behaviour of many historic monuments such as the Gothic Cathedrals the Mycenaean Tholoi the Pantheon the Colosseum the domes of Santa Maria del Fiore in Florence and St Peter s in Rome as well as the Leaning Tower of Pisa The last chapter the 11th regarding the behaviour of masonry buildings under seismic actions has been modified and integrated in order to take into account the numerous recent achievements of the research in the dynamic and seismic analysis The focal point is that there s no dissipation of energy during the deformation of masonry structures even if accompanied by cracks If properly reinforced masonry constructions have the sole resource to escape the seismic action developing the rocking without failure under alternate seismic action In this context the rocking of pier walls the main resistant components of the masonry structure has been here thoroughly examined Furthermore the out of plane and the in plane seismic strengths of masonry walls with openings has been investigated within the framework of Limit Analysis Through an interdisciplinary approach involving Mathematics Engineering and Architecture this book highlights the tight connection existing between the Statics of Masonry constructions and the principles that ruled the history of constructions since the beginnings as far as the Seventeenth century **Protection of Historical Constructions** Federico M.

Mazzolani, Raffaele Landolfo, Beatrice Faggiano, 2025-05-04 This book gathers the peer reviewed papers presented at the 5th International Conference on Protection of Historical Constructions PROHITECH held in Naples Italy on March 26 28 2025 The conference topics encompass structural and earthquake engineering intervention strategies materials and technologies

digital documentation architecture and urban planning cultural heritage all of which represented by a showcase of case studies covering different construction materials as well as sustainability energy efficiency and adaptation to climate changes As such the book represents an invaluable up to the minute tool providing an essential overview of protection of historical constructions and offers an important platform to researchers engineers and architects **Arch'01** C. Arch Bridges A. Sinopoli,2020-12-17 Modern structural engineering surprises us with the mastery and certainty with which it plans and carries out daring projects such as the most recent metal or concrete bridges whether they be suspension or arch bridges On the other hand little is yet known about the state of knowledge of construction science and techniques which well before the arrival of modern methods based on the mechanics of deformable continua made it possible in the past to erect the vaulted masonry structures that we have inherited The fact that these have lasted through many centuries to our time and are still in a fairly good state of conservation makes them competitive as far as stability and durability are concerned with those constructed in other materials Although it is known that the equilibrium of the arch is guaranteed by any funicular whatsoever of the loads contained inside the profile of an arch finding the unique solution is not such a certainty In other words the problem of the equilibrium of vaulted structures is Poleni's problem the one for which the Venetian scientist was able to give an exemplary solution on the occasion of the assessment of the dome of St Peter's Arch Bridges focuses on the main aspects of the debate about the masonry arch bridge History of structural mechanics and construction theoretical models analysis for assessment numerical methods experimental and non destructive testing maintenance and repair are the topics of the Conference The breadth and variety of the contributions presented and discussed by leading experts from many countries make this volume an authoritative source of up to date information

Conservation and Restoration of Built Heritage Salvatore D'Agostino,2021-08-16 The word conservation when used in the context of the preservation of built heritage implies an intrinsically complex concept that evolved over time since it has been influenced by the perception of history throughout time This volume emphasises why an understanding of the cultural evolution of the conservation approach must be considered a prerequisite for architects and engineers if they are to cooperate in full harmony with historic artistic culture for the preservation of global built heritage In particular the volume highlights how during the second half of the last century the preservation process also involved engineering the science of making practical applications of knowledge which for a long time made an uncritical use of techniques and materials and devised interventions on historical heritage that were heavily invasive The volume also devotes special attention to the problems related to seismic risk to which Italy Greece and Portugal are particularly prone Problems that emerge during the crisis and reconstruction phases are dealt with in detail as is scheduled maintenance as this latter approach always constitutes an improvement in the performance of the monument and is the most appropriate tool for the conservation of the built heritage Finally the volume collects examples of building restoration with case studies of many outstanding monuments

The work will appeal to professionals and academics in the broader fields of civil engineering both geotechnical and structural engineering architecture art history the history of architecture restoration and cultural heritage management This book will Provide a critical reading of the history of conservation Discuss materials and techniques of ancient architecture Cover seismic vulnerability and preservation of the historic integrity of the monument Advocate an approach based on programmed maintenance Feature numerous case histories including St Mark s Basilica in Venice and the complex restoration of the cathedral of Notre Dame in Paris

Building Theories Franca Trubiano, 2022-11-25 *Building Theories* speaks to the value of words in architecture It addresses the author s fascination with the voices of architects engineers builders and craftspeople whose ideas about building have been captured in text It discusses the content of treatises essays articles and letters by those who have been throughout history committed to the art of building In this *Building Theories* argues for the return of a practice of architectural theory that is set amongst building buildings and builders This journey of close reading reinterprets the words of Vitruvius Alberti de L Orme Le Camus de Mzi res Boull e Laugier Rondelet Semper Viollet le Duc Hbsch Btticher Berlage Muthesius Wagner Behrendt Gropius and Arup With chapters dedicated to texts from antiquity the Renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the Anglo Saxon world post 1968 readers are introduced to a wider more inclusive definition of architectural ideas *Building Theories* considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns In response it argues for a realignment of architecture with the concept of techn with a dual commitment to fabrica e ratio with a productive return to l art de bien bastir with the accurate translation of the term Baukunst and with an appeal to the architect s composite mind Students practitioners and educators will identify in *Building Theories* ways of thinking that strive for the integration of design with construction reject the supposed primacy of the former over the latter recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and accept without reservation that material transformations have always been at the origins of built form

The Mechanics of Architecture Edward Wyndham Tarn, 1894 [History of Construction Cultures Volume 1](#) João Mascarenhas-Mateus, Ana Paula Pires, 2021-08-01 *History of Construction Cultures Volume 1* contains papers presented at the 7ICCH Seventh International Congress on Construction History held at the Lisbon School of Architecture Portugal from 12 to 16 July 2021 The conference has been organized by the Lisbon School of Architecture FAUL NOVA School of Social Sciences and Humanities the Portuguese Society for Construction History Studies and the University of the Azores The contributions cover the wide interdisciplinary spectrum of Construction History and consist on the most recent advances in theory and practical case studies analysis following themes such as epistemological issues building actors building materials building machines tools and equipment construction processes building services and techniques structural theory and analysis political social and economic aspects knowledge transfer and cultural translation of construction cultures

Furthermore papers presented at thematic sessions aim at covering important problematics historical periods and different regions of the globe opening new directions for Construction History research We are what we build and how we build thus the study of Construction History is now more than ever at the centre of current debates as to the shape of a sustainable future for humankind Therefore History of Construction Cultures is a critical and indispensable work to expand our understanding of the ways in which everyday building activities have been perceived and experienced in different cultures from ancient times to our century and all over the world

Physical Models Bill Addis, Karl-Eugen Kurrer, Werner Lorenz, 2020-09-25 Physical models have been and continue to be used by engineers when faced with unprecedented challenges when engineering science has been inadequate or even non existent and in any other situation when engineers have needed to raise their confidence in a design proposal to a sufficient level in order to begin construction For this reason models have mostly been used by designers and constructors of highly innovative projects when previous experience has not been available The book covers the history of using physical models in the design and development of civil and building engineering projects including Robert Stephenson's Britannia Bridge in the 1840s the masonry Aswan Dam in the 1890s and the Boulder Dam in the 1930s tidal flow in estuaries and wind and seismic loads on structures from the 1890s the acoustics of concert halls and the design of thin concrete shell roofs from the 1920s and the dynamic behaviour of tall buildings from the 1930s as well as and cable net and membrane structures in the 1960s Individual designers featured include Eduardo Torroja Pier Luigi Nervi Heinz Hossdorf Heinz Isler Frei Otto Sergio Musmeci and Mamoru Kawaguchi The book concludes with overviews of the current use of physical models alongside computer models for example in boundary layer wind tunnels seismic engineering hydrology soil mechanics and air flow in buildings Traditionally progress in engineering has been attributed to the creation and use of engineering science the understanding of materials properties and the development of new construction methods The book argues that the use of reduced scale models has played an equally important part in the development of civil and building engineering However like the history of engineering design itself this crucial contribution has not been widely reported or celebrated The book includes 39 chapters written by 29 authors from ten different countries
