Introduction to Computational Physical Chemistry Joshua Schrier, 2017-06-16

This book will revolutionize the way physical chemistry is taught by bridging the gap between the traditional solve a bunch of equations for a very simple model approach and the computational methods that are used to solve research problems. This book will revolutionize the way physical chemistry is taught by bridging the gap between the traditional solve a bunch of equations for a very simple model approach and the computational methods that are used to solve research problems. While some recent textbooks include exercises using pre-packaged Hartree Fock DFT calculations, this is largely limited to giving students a proverbial black box. The DIY do it yourself approach taken in this book helps students gain understanding by building their own simulations from scratch. The reader of this book should come away with the ability to apply and adapt these techniques in computational chemistry to his or her own research problems and have an enhanced ability to critically evaluate other computational results. This book is mainly intended to be used in conjunction with an existing physical chemistry text such as McQuarrie Simon's *Physical Chemistry: A Molecular Approach*, but it is also well suited as a stand-alone text for upper-level undergraduate or intro graduate computational chemistry courses. Assumes no computational background. Enables students to build simulations from scratch to reproduce famous literature calculations. Teaches a variety of computational numerical simulation methods applicable to solving chemical problems. Designed to play well with McQuarrie Simon's landmark *P. CHEM* text but can be used with others as well.

Mathematica Beyond Mathematics José Guillermo Sánchez León, 2017-06-12

Although many books have been written about Mathematica, very few of them cover the new functionality added to the most recent versions of the program. *Mathematica Beyond Mathematics: The Wolfram Language in the Real World* introduces the new features using real-world examples based on the experience of the author as a consultant. In the process, you will also learn more about the Wolfram Language and how you can use it to solve a wide variety of problems. The author raises questions from a wide range of topics and answers them by taking full advantage of Mathematica's latest features. For example: What sources of energy does the world really use? How can we calculate tolerance limits in manufacturing processes? Are our cities getting warmer? Is the novel *El Quijote* written in Pi? How can we find planets outside our solar system?

Multiscale Turbulent Transport Marco Martins Afonso, Sílvio Gama, 2020-02-05

Turbulent transport is currently a prominent and ongoing investigation subject at the interface of methodologies from theory to numerical simulations and experiments, and it covers several spatiotemporal scales. Making a Pi media center stream videos and music from your Pi. **Smart CALL** Jozef Colpaert, Glenn Stockwell, 2022-02-28

The contributions in this volume focus on a human centered perspective namely the definition of smartness in terms of three qualities or dimensions: personalization, adaptation to the learner and the teacher, contextualization, adaptation to the sociocultural, educational and geotemporal context of the learner and socialization, the extent to which CALL stimulates interaction and relatedness between the learner, co-learner, teacher and other stakeholders. Contributing authors are established scholars coming from different continents using different technologies and representing different points of view. Essential Mechanics - Statics and Strength of Materials with MATLAB and Octave P. Venkataraman, 2020-01-07

Essential Mechanics: Statics and Strength of Materials with MATLAB and Octave combines two core engineering science courses: Statics and Strength of Materials in mechanical, civil and aerospace engineering. It weaves together various essential topics from Statics and Strength of Materials to allow discussing structural design from the very beginning. The traditional content of these courses are reordered to make it convenient to cover rigid body equilibrium and extend it to deformable body mechanics. The e-book covers the most useful topics from both courses with computational support through MATLAB/Octave. The traditional approach for engineering content is emphasized and is rigorously supported through graphics and analysis. Prior knowledge of MATLAB is not necessary. Instructions for its use in context are provided and explained. It takes advantage of the numerical, symbolic and graphical capability of MATLAB for effective problem solving. This computational ability provides a natural procedure for 'What if' exploration that is important for design. The book also emphasizes graphics to understand, learn and explore design. The idea for this book, the organization and the flow of content is original and new. The integration of computation and the marriage of analytical and computational skills is a new, valuable experience provided by this e-book. Most importantly, the book is very interactive with respect to the code as it appears along with the analysis. *Operator Theory, Pseudo-Differential Equations, and Mathematical Physics* Yuri I. Karlovich, Luigi Rodino, Bernd Silbermann, Ilya M. Spitkovsky, 2012-10-30

This volume is a collection of papers devoted to the 70th birthday of Professor Vladimir Rabinovich. The opening article by Stefan Samko includes a short biography of Vladimir Rabinovich along with some personal recollections and bibliography of his work. It is followed by twenty research and survey papers in various branches of analysis: pseudodifferential operators and partial differential equations, Toeplitz, Hankel and convolution type

operators variable Lebesgue spaces etc close to Professor Rabinovich's research interests. Many of them are written by participants of the International workshop Analysis Operator Theory and Mathematical Physics Ixtapa Mexico January 23-27 2012 having a long history of scientific collaboration with Vladimir Rabinovich and are partially based on the talks presented there. The volume will be of great interest to researchers and graduate students in differential equations operator theory functional and harmonic analysis and mathematical physics.

Spatial Analysis for Radar Remote Sensing of Tropical Forests Gianfranco D. De Grandi, Elsa Carla De Grandi, 2021-03-24. This book is based on the authors' extensive involvement in Synthetic Aperture Radar (SAR) mapping projects targeting the health of an earth ecosystem with great relevance for climate change studies of the tropical forests. The subject is developed from a vantage point provided by analysis in a combined space-scale-frequency-time-wavelength-polarization domain. The combination of space and scale offers the capability to zoom in and out like a virtual microscope to the resolution in tune with the underlying ecological phenomenon. It also enables statistical measures correlations related to the forest spatial distribution in case of backscatter or to the canopy height variations in case of interferometric observations. The time dimension brings into play measures of the ecosystem dynamics such as the flooding extent in the swamp forests deforestation or degradation events. The book's spotlight is on radar spatial random fields these being populated by either backscatter observations or elevation data from interferometric SAR. The basic tenet here is that the spatial statistic of the fields measured by the wavelet variance in stationary or non-stationary situations carries fingerprints of the forest structure. Features: Uniquely focused on specific techniques that provide multi-resolution spatial and temporal analysis of forest structure characteristics and changes. Examines several large and important international remote sensing projects aimed at documenting entire tropical ecosystems. Provides novel wavelet methods for tropical forest structural measures. Includes Python code for a suite of wavelet-based time series and single set InSAR coherence and backscatter speckle filters available to download. As the first book on this topic this composite approach appeals to both students learning through important case studies and to researchers finding new ideas for future studies.
