Science SOL 5.2- Plants & Animals

Diagram: Plants and animals have different processes and structures that allow them to survive and reproduce in an environment.

Plants are composed of parts that function differently to survive life processes such as taking energy from sunlight.

Plant Structure:

- Root:** Anchor the plant into the soil and absorb water and nutrients from the soil.
- Stem:** Support the plant and transport water and nutrients between the roots and leaves.
- Leaf:** Capture energy from sunlight and convert it into food through photosynthesis.
- Flower:** Reproduce the plant and produce seeds.
- Fruit:** Protect the seeds and help them spread.

Photosynthesis:

Plants use energy from sunlight to produce food through the process of photosynthesis. This is the green pigment, chlorophyll, that captures light energy from the sun and converts it into food (glucose). The food is then used by the plant to grow and survive.

Equation: $\text{Sunlight} + \text{Carbon Dioxide} + \text{Water} \rightarrow \text{Sugar} + \text{Oxygen} + \text{Food}$

Photosynthesis creates energy for the plant from the sun and converts it into sugar that can be used for energy.

Plant Reproduction:

Plants have different ways of reproducing. Some plants use seeds, while others use spores. Some plants are self-pollinating, while others are cross-pollinating. Some plants are annuals, while others are perennials.
