Gastrointestinal Cancer Immunotherapy: from Drug Resistance Mechanisms to Overcoming Strategies

Xiaofang Che,Yibo Fan,Jinyan Wang,Chunlei Zheng,Jia Wei,2023-06-15 Gastrointestinal GI cancers including gastric cancer colon cancer liver cancer esophageal cancer and pancreatic cancer seriously threaten the health of human beings worldwide with a high rate of morbidity and mortality The clinical successes achieved with immune checkpoint inhibitors ICIs targeting PD 1 PD L1 and CTLA 4 have opened a new cancer therapy era and brought new hope to cancer patients However the overall response rate ORR of ICI monotherapy in the non selective population is only about 20% in which some patients subsequently develop immunotherapy resistance Moreover the remaining 70 80% of patients displayed primary resistance to ICIs and a few patients even experienced hyper progression disease HPD Although PD L1 expression mismatch repair deficient MMRd high tumor mutational burden TMB H high homologous recombination deficiency HRD and tumor infiltrated immune cells TILs are known as effective biomarkers for immunotherapy growing studies have reported that ICIs could not improve the OS of all patients with PD L1 expression higher than 50% and the ORR of MSI H patients was only about 60% whereas some patients with low PD L1 expression or MSS could still benefit from immunotherapy indicating the complexity of ICI resistance Therefore it is of great importance and significance to explore the prediction biomarkers for primary or acquired immunotherapy resistance and elucidate their underlying molecular mechanisms and develop reversal strategies Due to the multiple steps of the cancer immune cycle and complex immune microenvironment any disorders of immune cell infiltration or T cell activation such as lack of antigens and or their presentation lack of response to antigen presentation and T cell priming could contribute to ICI resistance The combination with anti angiogenesis therapy radiotherapy chemotherapy and other ICIs has improved the efficacy of ICI therapy to some extent in the clinic Although numerous studies related to ICI resistance were reported in GI cancers due to the strong spatial temporal heterogeneity and the complex immune microenvironment in different kinds of GI cancers and different individuals many questions about ICI resistance and reversal strategies remain unsolved The aim of this Research Topic is to provide a forum to exhibit the latest research achievement related to the exploration of biomarkers for immunotherapy resistance including HPD and the underlying molecular mechanisms as well as the development of reversal strategies in GI cancers We hope this Research Topic will lead to a better understanding of precision cancer immunotherapy and provide useful clues for clinical application to benefit more GI cancer patients with immunotherapy
