E. Nicholls,2012-12-06 In ordinary mathematics an equation can be written down which is syntactically correct but for which no solution exists For example consider the equation $x \times 1$ defined over the real numbers there is no value of x

which satisfies it. Similarly, it is possible to specify objects using the formal specification language Z [3, 4] which can not possibly exist. Such specifications are called inconsistent and can arise in a number of ways. Example 1: The following Z specification of a function f from integers to integers $f: \mathbb{Z} \times \mathbb{Z} \rightarrow \mathbb{Z}$ is inconsistent because axiom i gives $f(0, 1) = 1$ while axiom ii gives $f(0, 2) = 2$. This contradicts the fact that f was declared as a function that is f must have a unique result when applied to an argument. Hence no such f exists. Furthermore, iff $0 < 1$ and $0 < 2$ then $1 < 2$ can be deduced. From $1 < 2$ anything can be deduced, thus showing the danger of an inconsistent specification. Note that all examples and proofs start with the word Example or Proof and end with the symbol \square .

Software Management Approaches: Project Management, Estimation, and Life Cycle Support Michael Haug, Eric W. Olsen, Gilles Vallet, Olivier Becart, 2011-06-28. C Amting Directorate General Information Society European Commission Brussels. Under the 4 Framework of European Research the European Systems and Software Initiative ESSI was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes, methods and technology within the software development process of a company. In addition, nodes, centres of expertise, European networks, organisations managing local activities, training and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to compete in the marketplace. The dissemination activities were designed to build a forum at European level to exchange information and knowledge gained within process improvement experiments. Their major objective was to spread the message and the results of experiments to a wider audience through a variety of different channels. The European Experience Exchange I UR X project has been one of these dissemination activities within the European Systems and Software Initiative. UR X has collected the results of practitioner reports from numerous workshops in Europe and presents in this series of books the results of Best Practice achievements in European Companies over the last few years.

Developments in Information & Knowledge Management for Business Applications Natalia Kryvinska, Aneta Poniszewska-Marańda, 2021-06-28. This book provides practical knowledge on different aspects of information and knowledge management in businesses. For enterprises, businesses those intend to remain prosperous and prolific, it is critically important to share best practices, ensure efficient information flow across company, capturing shared knowledge centrally and communicate compliance rules, i.e. managing competently information in general. It enables faster and better decisions by helping employees to build a strong expertise and by avoiding duplicated projects. Thus, the second volume of this series continues to explore different aspects of information and knowledge handling as well as doing business with information. We survey further the key aspects of managerial implications of the informational business. The novel methodologies and practices for the business information

processing as well as application of mathematical models to the business analytics and efficient management are examined
