Information Assurance For Network Centric Naval Forces:

Information Assurance for Network-Centric Naval Forces National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee on Information Assurance for Network-Centric Naval Forces, 2010-04-11 Owing to the expansion of network centric operating concepts across the Department of Defense DOD and the growing threat to information and cybersecurity from lone actors groups of like minded actors nation states and malicious insiders information assurance is an area of significant and growing importance and concern Because of the forward positioning of both the Navy's afloat and the Marine Corps expeditionary forces IA issues for naval forces are exacerbated and are tightly linked to operational success Broad based IA success is viewed by the NRC's Committee on Information Assurance for Network Centric Naval Forces as providing a central underpinning to the DOD's network centric operational concept and the Department of the Navy's DON's FORCEnet operational vision Accordingly this report provides a view and analysis of information assurance in the context of naval mission assurance *Network-Centric Naval Forces* National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Naval Studies Board, Committee on Network-Centric Naval Forces, 2000-07-21 *Network Centric Naval Forces A Transition Strategy for Enhancing Operational Capabilities* is a study to advise the Department of the Navy regarding its transition strategy to achieve a network centric naval force through technology application This report discusses the technical underpinnings needed for a transition to networkcentric forces and capabilities *Information Assurance for Network-centric Naval Forces*, 2010 **Overview** National Research Council (U.S.). Committee on Network-Centric Naval Forces, 2000 *Network Centric Warfare* Paul T. Mitchell, 2013-03-07 Since its emergence in 1998 the concept of Network Centric Warfare NCW has become a central driver behind America's military transformation and seems to offer the possibility of true integration between multinational military formations Even though NCW or variations on its themes has been adopted by most armed services it is a concept in operational and doctrinal development It is shaping not only how militaries operate but just as importantly what they are operating with and potentially altering the strategic landscape This paper examines how the current military dominance of the US over every other state means that only it has the capacity to sustain military activity on a global scale and that other states participating in US led coalitions must be prepared to work in an interoperable fashion It explores the application of computer networks to military operations in conjunction with the need to secure a network's information and to assure that it accurately represents situational reality Drawing on an examination of how networks affected naval operations in the Persian Gulf during 2002 and 2003 as conducted by America's Australian and Canadian coalition partners the paper warns that in seeking allies with the requisite technological capabilities but also those that it can trust with its information resources the US may be heading towards a very secure digital trap **Network Centric Warfare and Coalition Operations** Paul T. Mitchell, 2009-02-05 This book argues that Network Centric Warfare NCW influences how developed militaries operate in the

same fashion that an operating system influences the development of computer software It examines three inter related issues the overwhelming military power of the United States the growing influence of NCW on military thinking and the centrality of coalition operations in modern military endeavours Irrespective of terrorist threats and local insurgencies the present international structure is remarkably stable none of the major powers seeks to alter the system from its present liberal character as demonstrated by the lack of a military response to US military primacy This primacy privileges the American military doctrine and thus the importance of NCW which promises a future of rapid precise and highly efficient operations but also a future predicated on the digitization of the battle space Participation in future American led military endeavours will require coalition partners to be networked interoperability will therefore be a key consideration of a partner s strategic worth Network Centric Warfare and Coalition Operations will be of great interest to students of strategic studies international security US foreign policy and international relations in general *Naval Studies Board 40th Anniversary* National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, 2014-12-22 Forty years ago the Naval Studies Board was created at the request of then Chief of Naval Operations Admiral Elmo R Zumwalt Jr As stated in his request to the National Academy of Sciences he thought it important for the Navy to have an outside resource to which it could turn for independent and outside counsel on any area of its responsibilities involving the interplay of scientific and technical matters with other national issues Admiral Zumwalt together with Under Secretary of the Navy Honorable David S Potter and President of the National Academy of Sciences Dr Philip Handler recognized the importance of not only continuing but also focusing and strengthening the relationship that had existed between the National Academy of Sciences and the Department of the Navy since the Academy s creation in 1863 To commemorate this special anniversary Naval Studies Board 40th Anniversary provides an overview of the history mission and accomplishments of the Board In the coming years the Naval Studies Board will continue to serve as a source of independent long range scientific and technical planning advice for the nation s naval forces It will also work to ensure that the relationships between the operational science engineering and technical communities remain as strong and productive as ever to ensure that progress continues in areas most critical to meeting future naval forces needs *A Review of U.S. Navy Cyber Defense Capabilities* National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee for A Review of U.S. Navy Cyber Defense Capabilities, 2015-01-23 In order to conduct operations successfully and defend its capabilities against all warfighting domains many have warned the Department of Defense DoD of the severity of the cyber threat and called for greater attention to defending against potential cyber attacks For several years many within and outside DoD have called for even greater attention to addressing threats to cyberspace At the request of the Chief of Naval Operations the National Research Council appointed an expert committee to review the U S Navy s cyber defense capabilities The Department of the Navy has determined that the final report prepared by the committee is classified in its entirety under Executive Order 13526 and

therefore cannot be made available to the public A Review of U S Navy Cyber Defense Capabilities is the abbreviated report and provides background information on the full report and the committee that prepared it Cyber Warfare and Terrorism: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2020-03-06 Through the rise of big data and the internet of things terrorist organizations have been freed from geographic and logistical confines and now have more power than ever before to strike the average citizen directly at home This coupled with the inherently asymmetrical nature of cyberwarfare which grants great advantage to the attacker has created an unprecedented national security risk that both governments and their citizens are woefully ill prepared to face Examining cyber warfare and terrorism through a critical and academic perspective can lead to a better understanding of its foundations and implications Cyber Warfare and Terrorism Concepts Methodologies Tools and Applications is an essential reference for the latest research on the utilization of online tools by terrorist organizations to communicate with and recruit potential extremists and examines effective countermeasures employed by law enforcement agencies to defend against such threats Highlighting a range of topics such as cyber threats digital intelligence and counterterrorism this multi volume book is ideally designed for law enforcement government officials lawmakers security analysts IT specialists software developers intelligence and security practitioners students educators and researchers **General Naval Tactics** Milan Vego,2020-10-15 In General Naval Tactics Naval War College professor and renowned tactical expert Milan Vego describes and explains those aspects of naval tactics most closely related to the human factor Specifically he explains in some detail the objectives and methods elements of tactical employment of naval forces command and control combat support tactical design decision making and planning execution leadership doctrine and training Vego derives certain commonalities of naval tactics that occurred in recent and distant wars at sea Many parts of his theoretical constructs are based on works of a number of well known and influential naval theoreticians such as Admirals Alfred T Mahan Bradley A Fiske Raoul Castex and Ren Daveluy and influential naval theoreticians Whenever possible the author illustrates each aspect of theory by carefully selected examples from naval history making the theory more understandable and interesting Vego aims to present theory that is general in nature and therefore more durable in its validity The more general the theory the greater the possibility of accommodating changes based on new interpretations of past events and as a result of gaining fresh insight from the lessons learned *ICCWS 2016 11th International Conference on Cyber Warfare and Security* Dr Tanya Zlateva and Professor Virginia Greiman,2016 The 11thInternational Conference on Cyber Warfare and Security ICCWS 2016 is being held at Boston University Boston USA on the 17 18th March 2016 The Conference Chair is Dr Tanya Zlateva and the Programme Chair is Professor Virginia Greiman both from Boston University ICCWS is a recognised Cyber Security event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings display their work in progress and discuss conceptual and empirical advances in the area of Cyber Warfare and Cyber Security It provides an important opportunity for

researchers and managers to come together with peers to share their experiences of using the varied and expanding range of Cyberwar and Cyber Security research available to them The keynote speakers for the conference are Daryl Haegley from the Department of Defense DoD who will address the topic Control Systems Networks What s in Your Building and Neal Ziring from the National Security Agency who will be providing some insight to the issue of Is Security Achievable A Practical Perspective ICCWS received 125 abstract submissions this year After the double blind peer review process there are 43 Academic Research Papers 8 PhD papers Research papers 7 Masters and 1 work in progress papers published in these Conference Proceedings These papers represent work from around the world including Australia Canada China Czech Republic District of Columbia Finland France Israel Japan Lebanon Netherlands Pakistan Russian Federation Saudi Arabia South Africa Turkey United Arab Emirates UK USA Indian and American Perspectives on Technological Developments in the Maritime Domain and Their Strategic Implications in the Indian Ocean Region Vice Admiral Pradeep Kaushiva, Commander Kamlesh K Agnihotri, 2013-04-15 The maritime domain hosting the highways of global prosperity through trade industrial raw material and energy links rates high in its potential for conflict As the global pendulum of economic vibrancy swings eastwards the Indian Ocean Region IOR has been receiving increasing attention from all actors state as well as non state ones and now presents itself in sharp focus as one of the volatile seascapes on this earth The navies operating in the region will therefore need to depend on high technology and associated doctrines and procedures so as to effectively deal with the wide spectrum of challenges therein It will also become incumbent upon such littoral states as can afford the high cost of technology to catch up so as to maintain their relevance in the great game being played out in their very own backyard The United States as a leader in inventing and exploiting technology sets its own benchmarks in internalization of advanced technologies to undertake maritime missions at and from the sea in support of its military operations ashore China on the other hand has been striving towards achieving asymmetric war fighting capabilities supported by other developing technologies as well as core capabilities like the Beidou position fixing system which would be central to network centric operations including missile guidance systems As the IOR increasingly transforms into an arena of extra regional power play the implications of technologically enabled confrontations and their impact on resident states are poised to weigh in on a scale never imagined before There is thus a greater need for India to gain in depth knowledge of and develop a perspective on advanced technology sensors weapons supporting infrastructures doctrines and futuristic concepts in the maritime domain and their potential as strategic game changers in the IOR This book aims to foster greater understanding of the challenges facing the IOR and also look at how the technological advances in the maritime domain may possibly handle such challenges It should provide useful resource material to those investigating the impact of technology on meeting the maritime challenges in the IOR **Routledge Handbook of Naval Strategy and Security** Joachim Krause, Sebastian Bruns, 2016-03-17 This new handbook provides a comprehensive overview of the issues facing naval

strategy and security in the twenty first century Featuring contributions from some of the world s premier researchers and practitioners in the field of naval strategy and security this handbook covers naval security issues in diverse regions of the world from the Indian Ocean and the Mediterranean to the Arctic and the piracy prone waters off East Africa s coast It outlines major policy challenges arising from competing claims transnational organized crime and maritime terrorism and details national and alliance reactions to these problems While this volume provides detailed analyses on operational judicial and legislative consequences that contemporary maritime security threats pose it also places a specific emphasis on naval strategy With a public very much focused on the softer constabulary roles naval forces play such as humanitarian assistance disaster relief naval diplomacy maintenance of good order at sea the overarching hard power role of navies has been pushed into the background In fact navies and seapower have been notably absent from many recent academic discussions and deliberations of maritime security This handbook provides a much desired addition to the literature for researchers and analysts in the social sciences on the relationship between security policy and military means on under and from the sea It comprehensively explains the state of naval security in this maritime century and the role of naval forces in it This book will be of much interest to students of naval security and naval strategy security studies and IR as well as practitioners in the field

Operational Warfare at Sea Milan

Vego,2017-07-06 This book provides a comprehensive analysis of both the theory and practice of operational warfare at sea and this 2nd edition has been thoroughly revised with two completely new chapters **C4ISR for Future Naval Strike Groups** National Research Council,Division on Engineering and Physical Sciences,Naval Studies Board,Committee on C4ISR for Future Naval Strike Groups,2006-04-26 The Navy has put forth a new construct for its strike forces that enables more effective forward deterrence and rapid response A key aspect of this construct is the need for flexible adaptive command control communications computers intelligence surveillance and reconnaissance C4ISR systems To assist development of this capability the Navy asked the NRC to examine C4ISR for carrier expeditionary and strike and missile defense strike groups and for expeditionary strike forces This report provides an assessment of C4ISR capabilities for each type of strike group recommendations for C4ISR architecture for use in major combat operations promising technology trends and an examination of organizational improvements that can enable the recommended architecture **Global Information Warfare** Andrew Jones,Gerald L. Kovacich,2015-09-25 Since the turn of the century much has happened in politics governments spying technology global business mobile communications and global competition on national and corporate levels These sweeping changes have nearly annihilated privacy anywhere in the world and have also affected how global information warfare is waged and what must be do **Review of the U.S. Department of Defense Air, Space, and Supporting Information Systems Science and Technology Program** National Research Council,Division on Engineering and Physical Sciences,Department of Military Science and Technology,Committee on Review of the U.S. Department of Defense, Air and Space Systems Science and Technology Program,2001-09-05 Since the mid 1940s when Vannevar Bush and Theodore von Karman wrote Science the Endless Frontier and Toward New Horizons respectively there has been a consensus that strong Department of Defense support of science and technology S T is important to the security of the United States During the Cold War as it faced technologically capable adversaries whose forces potentially outnumbered U S forces the United States relied on a strong defense S T program to support the development of technologically superior weapons and systems that would enable it to prevail in the event of conflict Since the end of the Cold War the United States has relied on its technological superiority to maintain a military advantage while at the same time reducing the size of its forces Over the past half century creating and maintaining a technologically superior military capability have become fundamental to U S national security strategy and investment in S T has become a basic component of the defense budget In late 1998 Congress asked the Secretary of Defense to conduct a study in cooperation with the National Research Council NRC on the S T base of the U S Department of Defense DoD Congress was particularly concerned about areas of the S T program related to air systems space systems and supporting information systems Its concern was based on the Air Force s reduction of its S T program from the largest of the three military service programs to the smallest Congress also wanted to ensure that the Air Force maintained an appropriately sized S T workforce In late 1999 the Deputy Under Secretary of

Defense for Science and Technology asked the NRC to conduct a study to explore these issues *Responding to Capability Surprise* National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee on Capability Surprise on U.S. Naval Forces, 2013-12-31 From a military operational standpoint surprise is an event or capability that could affect the outcome of a mission or campaign for which preparations are not in place By definition it is not possible to truly anticipate surprise It is only possible to prevent it in the sense of minimizing the number of possible surprises by appropriate planning to create systems that are resilient to an adversary's unexpected actions or to rapidly and effectively respond when surprised *Responding to Capability Surprise* examines the issues surrounding capability surprise both operational and technical facing the U S Navy Marine Corps and Coast Guard This report selects a few surprises from across a continuum of surprises from disruptive technologies to intelligence inferred capability developments to operational deployments and assesses what the Naval Forces are doing and could do about them while being mindful of future budgetary declines The report then examines which processes are in place or could be in place in the Navy the Marine Corps and the Coast Guard to address such surprises Today's U S naval forces continue to face a wide range of potential threats in the indefinite future and for this reason must continue to balance and meet their force structure needs The recommendations of *Responding to Capability Surprise* will help to ensure more responsive more resilient and more adaptive behavior across the organization from the most senior leadership to the individual sailors Marines and Coast Guardsmen
