Clinical Reasoning in the Health Professions E-Book Joy Higgs, Gail M. Jensen, Stephen Loftus, Franziska V. Trede, Sandra Grace, 2024-08-30 Clinical reasoning is the complex thinking and decision making used to come to a diagnosis and management plan. It is a core competency of clinical practice but because it involves many elements and unconscious processes it is both difficult to learn and teach. *Clinical Reasoning in the Health Professions Fifth Edition* provides the concepts and frameworks healthcare professionals need to be able to reason effectively, make sound and defensible clinical decisions, and learn from experience as they develop from student to practitioner. Edited by leading experts in the field from Australia and the US, this fifth edition presents the latest understandings and evidence around clinical reasoning in clinical practice and how it can be taught and assessed. It is ideal for both undergraduate and post graduate health students as well as academic and clinical health educators. Presents a new understanding of clinical reasoning in the circumstances confronting healthcare systems today. Covers the future of healthcare and social justice. Provides the latest theories on teaching, learning, and assessing clinical reasoning. Ideal for educators and researchers. Easy to read with figures, tables, and chapter summaries. Case studies integrate theory with practice. Examines clinical reasoning as a core competency. Includes team-based care, teaming, and the role of shared decision making. New themes, new ways of teaching and assessment, new practical approaches to application of theory, and developing a curriculum.

Handbook of Visual Communication Sheree Josephson, James Kelly, Ken Smith, 2020-04-03 This Handbook of

Visual Communication explores the key theoretical areas and research methods of visual communication. With chapters contributed by many of the best known and respected scholars in visual communication, this volume brings together significant and influential work in the discipline. The second edition of this already classic text has been completely revised to reflect the metamorphosis of communication in the last 15 years and the ubiquity of visual communication in our modern mediated lifestyle. Thirteen major theories of communication are defined by the top experts in their fields: perception, cognition, aesthetics, visual rhetoric, semiotics, cultural studies, ethnography, narrative, media aesthetics, digital media, intertextuality, ethics, and visual literacy. Each of these theory chapters is followed by an exemplar study or two in the area demonstrating the various methods used in visual communication research as well as the research approaches applicable for specific media types. The Handbook of Visual Communication is a theoretical and methodological handbook for visual communication researchers and a compilation for much of the theoretical background necessary to understand visual communication. It is required reading for scholars, researchers, and advanced students in visual communication and it will be influential in other disciplines such as advertising, persuasion, and media studies. The volume will also be essential to media practitioners seeking to understand the visual aspects of how audiences use media to contribute to more effective use of each specific medium.

Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70

National Library of Medicine Current Catalog National Library of Medicine (U.S.), **Interpreting Statistical Findings: a Guide for Health Professionals and Students** Jan Walker, Palo Alto, 2010-07-16 This book is aimed at those studying and working in the field of health care including nurses and the professions allied to medicine who have little prior knowledge of statistics but for whom critical review of research is an essential skill. The book will provide support for those conducting literature based projects which require the student to review evidence generated through empirical investigations. Evidence based projects or assignments have for several years formed the basis of a final year independent study for most honours degrees and increasing numbers of masters programmes in health care. Working from practical examples, exercises, and illustrations, explanations will be given in relatively straightforward conceptual terms. This book is intended as a practical guide and reference book. Bullet points and illustrations will be used wherever possible and dense text avoided. A detailed glossary of statistical concepts and terms will be provided as an additional resource for learning. The emphasis throughout will be to enable the student to transfer their learning to the research reports they are reading. Using fundamental criteria and aided by a list of key questions, students will be able to make an informed judgement about the quality of the research findings. The examples used will be based closely on actual research data but essential details will be changed. This approach is intended to avoid problems of copyright and overcome the ethical problem of challenging published research in a forum where there is no right of the authors to reply. As follow up exercises, students will be directed to references where they can test out their learning on real examples guided by key questions.
