Development and Validation of the Information Literacy Assessment Scale for Education (ILAS-ED) Penny Beile, 2005 No population exists where it is more important to produce information literate individuals than teacher candidates yet few would suggest that practitioners newly entering the field are adequately prepared to model and teach information literacy to their students Consequently information literacy has recently been established as a key outcome by a number of teacher education accrediting bodies and professional associations Only in the last few years has there been an attempt to develop a standardized scale to assess general information literacy skills and at the time of this writing no standardized tool exists that measures the information literacy levels of teacher candidates This study documents the development and validation of a standardized instrument to measure teacher candidates information literacy skills levels based on the International Society for Technology in Education's 2000 National Educational Technology Standards for Teachers and the Association of College and Research Libraries 2000 Information Literacy Competency Standards for Higher Education Undergraduate students enrolled in the teacher education program at the University of Central Florida were identified and asked to complete a test consisting of 22 multiple choice test items and 13 demographic and self-percept items A number of procedures designed to enhance validity and reliability of the scale were integrated throughout its development Results of the test were also submitted to analysis This project is part of a national initiative to develop standardized information literacy assessment tools specific to a discipline and is spearheaded by the Project for the Standardized Assessment of Information Literacy Skills and the Institute for Library and Information

An Intervention and Assessment to Improve Information Literacy Davida Scharf, 2013 Purpose The goal of the study was to test an intervention using a brief essay as an instrument for evaluating higher order information literacy skills in college students while accounting for prior conditions such as socioeconomic status and prior academic achievement and identify other predictors of information literacy through an evaluation of student behavior and attitude Design Methods Approach An instructional intervention was evaluated using a brief essay as a pre and posttest of learning in a course in technical communication Multiple readers rated essays on five criteria to measure higher order skills Interrater reliability and internal consistency of the measures were tested Analyses of variance and covariance were used to measure academic gains and to partial out the effects of confounding variables Student behavior was measured by level of activity in the course management system and essay length Student attitude was measured through a content analysis of their reflective statements A control group of students who took the same course without the intervention but who did not take the pretest also took the posttest Findings 1 The method used for measuring information literacy was found to be reliable and valid 2 The use of the brief essay as a pre and posttest showed that the students in the treatment group achieved impressive gains in higher order skills associated with information literacy 3 The students in the treatment group significantly outperformed students in the control group with substantive effect sizes explaining results 4 Socioeconomic status had no significant impact on information literacy 5 Student use of online instructional materials had no significant impact on information literacy Originality Value A model of information literacy assessment in higher education was proposed to isolate important classes of variables affecting learning An experimental design using multivariate methods to account for the multiple influences of variables on information literacy allowed for the determination and partitioning of the influence of each variable and sets of variables This knowledge allows for efficient and systematic progress to be recorded where less productive variables can be dropped from the model and significant and important variables are kept in the model to increase the amount of variability explained in information literacy outcomes
