**Methodological Developments in Data Linkage** Katie Harron,Harvey Goldstein,Chris Dibben,2015-09-22 A  
comprehensive compilation of new developments in data linkage methodology The increasing availability of large  
administrative databases has led to a dramatic rise in the use of data linkage yet the standard texts on linkage are still those  
which describe the seminal work from the 1950 60s with some updates Linkage and analysis of data across sources remains  
problematic due to lack of discriminatory and accurate identifiers missing data and regulatory issues Recent developments in  
data linkage methodology have concentrated on bias and analysis of linked data novel approaches to organising relationships  
between databases and privacy preserving linkage Methodological Developments in Data Linkage brings together a  
collection of contributions from members of the international data linkage community covering cutting edge methodology in  
this field It presents opportunities and challenges provided by linkage of large and often complex datasets including analysis  
problems legal and security aspects models for data access and the development of novel research areas New methods for  
handling uncertainty in analysis of linked data solutions for anonymised linkage and alternative models for data collection are  
also discussed Key Features Presents cutting edge methods for a topic of increasing importance to a wide range of research  
areas with applications to data linkage systems internationally Covers the essential issues associated with data linkage today  
Includes examples based on real data linkage systems highlighting the opportunities successes and challenges that the  
increasing availability of linkage data provides Novel approach incorporates technical aspects of both linkage management  
and analysis of linked data This book will be of core interest to academics government employees data holders data managers  
analysts and statisticians who use administrative data It will also appeal to researchers in a variety of areas including  
epidemiology biostatistics social statistics informatics policy and public health
