Caleb Finch, Edward L. Schneider, 1985 HANDBOOK OF CELL BIOLOGY OF AGING Vincent J. Cristofalo, 1985-12-30

The Handbooks of Aging, 1985 The Handbooks of Aging, 1976 The Encyclopedia of Aging Richard Schulz, 2006

Print CourseSmart **The Biology of Ageing and Its Clinical Implication** Aza Abdulla, Gurcharan Singh Rai, 2013

The Biology of Ageing provides the reader with a learning guide on the biology of ageing through an overview of the changes that occur at both cellular and system levels knowledge of how biological changes of ageing impact on physiology and the clinical relevance in medical practice and a practical consideration of these changes in disease presentations and how these changes may impact on disease management back cover Handbook of Theories of Aging, Second Edition Merrill Silverstein PhD, Vern L. Bengtson PhD, Norella Putney PhD, Daphna Gans PhD, 2008-10-27

The field of gerontology has often been criticized for being data rich but theory poor The editors of this book address this issue by stressing the importance of theory in gerontology While the previous edition focused on multidisciplinary approaches to aging theory this new edition provides cross disciplinary integrative explanations of aging theory The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in adjacent fields in studying aging and age related phenomena This edition of the Handbook consists of 39 chapters written by 67 internationally recognized experts in the field of aging It is organized in seven sections reflecting the major theoretical developments in gerontology over the past 10 years

Special Features Comprehensive coverage of aging theory focusing on the biological psychological and social aspects of aging A section dedicated to discussing how aging theory informs public policy A concluding chapter summarizing the major themes of aging and offering predictions about the future of theory development Required reading for graduate students and post doctoral fellows this textbook represents the current status of theoretical development in the study of aging Handbook of the Psychology of Aging James E. Birren, 2013-10-22

Handbook of the Psychology of Aging Third Edition describes the psychology of adult development and aging This book is organized into four parts encompassing 28 chapters that cover the basic behavioral changes and capacities occurring with advancing age The first part deals with the history concept and models of the psychology of aging This part also examines the distinctions between physical biological psychological and social time or age The second part explores the influences of racial ethnic and cultural factors on biological health social and psychological aging processes This part also surveys gender differences in aging The third part describes numerous behavioral processes changes and patterns in advancing age This part specifically considers the motivation cognitive and motor performance attentional processes learning memory personality and wisdom in aging The fourth part focuses on the applications of the concepts and principles of aging to the individual and society This book will be of great value to psychologists researchers and graduate students Handbook of Models for Human Aging P. Michael Conn, 2011-04-28

The Handbook of Models for Human Aging is designed as the only comprehensive work available that covers the diversity of aging models currently available For each animal model it presents key aspects of biology nutrition factors affecting life span

methods of age determination use in research and disadvantages advantages of use Chapters on comparative models take a broad sweep of age related diseases from Alzheimer's to joint disease cataracts cancer and obesity In addition there is an historical overview and discussion of model availability key methods and ethical issues Utilizes a multidisciplinary approach Shows tricks and approaches not available in primary publications First volume of its kind to combine both methods of study for human aging and animal models Over 200 illustrations

Aging and the Aged Linna Funk Place, 2019-03-13 This book introduces undergraduates to library research in the field of gerontology and focuses on the wide variety of sources available for research It covers physiological and psychological aspects of aging social aspects of aging and

environmental aspects of aging **Principles and Practice of Geriatric Surgery** Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2013-06-29 More than two decades ago in response to the special healthcare needs of the aging American population interest in the field of geriatric medicine began to grow and blossom in the United States In 1984 and 1985 under the editorial leadership of Christine K Cassel and William R Hazzard respectively two major textbooks devoted to the medical care of aged patients were published These scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient Three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists For the editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic problems are diseases of the aged It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate **The Biology of Ageing** Gurcharan Rai, Aza Abdulla, 2022-02-16

One of the problems geriatricians are confronted with in everyday clinical practice is differentiating disease from the process of old age The challenges of ageing require a better understanding of the essential biology of ageing in order to separate ageing from disease and indeed ageing made worse by disease Although the topic is large and diverse this practical and easy to read reference book contains vital information on the biology of ageing It provides a concise understanding of the changes that occur and focuses on the clinical implications of ageing MCQs are featured throughout for revision and examination practice The Biology of Ageing provides the reader with a learning guide on the biology of ageing through an overview of the changes that occur at both cellular and system levels knowledge of how biological changes of ageing impact on physiology and the clinical relevance in medical practice a practical consideration of these changes in disease presentations and how these changes may impact on disease management This full colour guide featuring slides MRIs figures and photographs is ideal for doctors training in geriatric medicine practising geriatricians and those with an interest in management of older people **Biology of Aging** Robert Arking, 2006-02-02 Robert Arking's Biology of Aging 3rd edition is an introductory text to the biology of aging which gives advanced undergraduate and graduate students a thorough review of the entire field His prior two editions have also served admirably as a reference text for clinicians and scientists This new edition captures the extraordinary recent advances in our knowledge of the ultimate and proximal mechanisms underlying the phenomenon of aging As a result six important conceptual changes are included here Clarified distinctions between the biological mechanisms involved in longevity determination and those involved in senescent processes A new conceptual framework

around which we can organize all the new facts about aging This will assist readers to make sense of the information and use the data to form their own ideas Increased knowledge of aging cells has lead to new ideas on how a cell transits from a healthy state to a senescent state while still allowing for high levels of intra and inter specific variability Discussion of senescent mechanisms assists the reader to understand that aging is a non programmatic loss of function likely arising from the loss of regulatory signals and so is modifiable in the laboratory Because the standard evolutionary story does not fully explain the evolution of social organisms this edition also includes recent work dealing with intergenerational resource transfers Lastly if aging mechanisms are plastic then the demand to move these anti aging interventions into the human arena will inevitably grow A discussion of the biological and ethical arguments on both sides of the question frames the question in an appropriate manner The mass of data related to aging is summarized into fifteen focused chapters each dealing with some particular aspect of the problem The last two chapters integrate all this material into a coherent view of how the relevant biological processes change over the life span This view is expressed in two non technical figures you might say that the whole book exists to fully support Figs 9 4 14 9 whose meanings are elucidated as the reader progresses through the book

Clinical Neurology of Aging Martin L. Albert, Janice E. Knoefel, 1994 This thorough revision of a well established text presents essential information on the neurobiology of aging There are new chapters on competency and ethics problems of daily living psychopharmacology and stability and falls Written in a accessible style this book will be invaluable to clinicians and neurologists who treat elderly patients
