Kulski, Takashi Shiina, Johannes M. Dijkstra, 2020-01-15 The major histocompatibility complex MHC is a highly polymorphic and diverse multigene locus in all jawed vertebrate species that has an integral role in adaptive innate immune systems transplantation and infectious and autoimmune diseases The MHC supra locus in mammalian vertebrates is usually partitioned into three distinct regions known as classes I II and III which to varying extents can be found conserved in nonmammalian jawed vertebrates such as bony fish amphibians and bird lineages The MHC gene region is characterized particularly by the expression of class I and class II glycoproteins that bind peptides derived from intracellular or extracellular antigens to circulating T cells While this expressed antigenic specificity remains the predominant interest with

respect to MHC function and polymorphism in a population a broader concept has emerged that examines the MHC as a multifunctional polymorphic controller that facilitates and regulates genome diversity with a much greater array of functions and effects than just MHC restricted antigen recognition This volume of 19 reprints presented by various experts and collected from the Special Issue of Cells on MHC in Health and Disease covers a broad range of topics on the genomic diversity of the MHC regulatory system in various vertebrate species including MHC class I II and III genes innate and adaptive immunity neurology transplantation haplotypes infectious and autoimmune diseases fecundity conservation allelic lineages and evolution Taken together these articles demonstrate the immense complexity and diversity of the MHC structure and function within and between different vertebrate species

Calle, 2018-05-07 Bringing together a globally diverse range of timely topics related to zoo and wild animals Fowler's Zoo and Wild Animal Medicine Volume 9 is an invaluable tool for any professional working directly with wildlife and zoo animals. The text's user-friendly format guides readers through biology, anatomy, and special physiology, reproduction, restraint, and handling, housing requirements, nutrition, and feeding, surgery, and anesthesia, diagnostics, and therapeutics for each animal. Two new co-editors and a globally diverse group of expert contributors each lend their expertise on a wide range of new topics, including a new section on emerging wildlife diseases covering topics like MERS, Equine Herpesvirus, and Ebola in great apes. Other new topics integrated into this ninth volume include stem cell therapy in zoo medicine, cardiac disease in great apes, disease risk assessment in field studies, Tasmanian devil tumors, and the latest information on the elephant herpesvirus. With all its synthesized coverage of emerging trends, treatment protocols, and diagnostic updates new to the field, Fowler's is a reference you don't want to be without. Current therapy format ensures that each CT volume in the series covers all new topics that are relevant at the time of publication. Synthesized topics offer the right amount of depth, often fewer than 10 pages, to maintain an accessible format. General taxon-based format covers all terrestrial vertebrate taxa plus selected topics on aquatic and invertebrate taxa. Updated information from the Zoological Information Management System (ZIMS) has been incorporated to keep readers up to date on this worldwide system. Globally diverse panel of expert contributors each incorporate the latest research and clinical management of captive and free-ranging wild animals throughout the world. NEW! Two new co-editors for a total of three editors each lend their expertise on a wide range of new wild and zoo animal topics. NEW! Section on emerging wildlife diseases includes chapters on MERS, SARS, Ebola in great apes, and a variety of other emerging wildlife diseases. *Camelid Farming, Production, Reproduction, Health, and Welfare* Barbara Padalino, Carlos Iglesias Pastrana, Laura Menchetti, Asim Faraz, 2025-10-09 Camelid population is growing and 2024 is the Year of the Camelids. There has been an increase in camelid-related scientific output in the last few decades covering all aspects from farming to reproduction technologies and from internal medicine to welfare. Camelids are multi-purpose animals being kept not only for milk, meat, and wool production but also for working, riding, beauty contests, and racing. The growing needs and rising awareness about camels have changed the notion of them being just ships of the desert to being recognized as food security animals in many arid and semi-arid areas of the world. Camels play a prominent role in pastoral economies globally and are predicted to meet the milk and meat demands of pastoral communities in particular. Consequently, camels have been

described as the livestock of the future However New World Camelids namely llamas and alpacas have also gained increasing popularity resulting in a greater demand for veterinary care for llamas and alpacas worldwide Our current knowledge of camelid behavior physiology health and welfare is still limited and camelid farming practices are often based on traditions and beliefs Therefore there is a pressing need for more evidence to implement regulations that can protect camelid health and welfare while also enhancing their productivity We welcome articles addressing but not limited to the following themes Advances in camelid reproductive technologies Innovations in camelid health and internal medicine Current trends in camelid welfare practices Impact of camelid farming on pastoral economies Role of camelids in food security and sustainability in arid regions Comparative studies between Old World and New World camelids *Fowler's Zoo and Wild Animal Medicine, Volume 8* R. Eric Miller, Murray E.
