

Statistical Learning Theory

The risk functional may be easily understood from the finite approximation

$$R(\bar{w}) = \sum_i L(\bar{x}_i, d_i) \cdot P(\bar{x}_i, d_i)$$

where $P(\bar{x}_i, d_i)$ denotes the probability of drawing the i -th sample.

The Neuropsychology of Attention Ronald A. Cohen, 2013-12-11 It has been 15 years since the original publication of Neuropsychology of Attention At the time of its publication attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists Yet attention was typically viewed as a nuisance variable a factor that needed to be accounted for when assessing brain function but of limited importance in its own right There is a need for a new edition of this book within Neuropsychology to present an updated and integrated review of what is known about attention the disorders that affect it and approaches to its clinical assessment and treatment Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain

Machine Learning: Theory and Applications, 2013-05-16 Statistical learning and analysis techniques have become extremely important today given the tremendous growth in the size of heterogeneous data collections and the ability to process it even from physically distant locations Recent advances made in the field of machine learning provide a strong framework for robust learning from the diverse corpora and continue to impact a variety of research problems across multiple scientific disciplines The aim of this handbook is to familiarize beginners as well as experts with some of the recent techniques in this field The Handbook is divided in two sections Theory and Applications covering machine learning data analytics biometrics document recognition and security Very relevant to current research challenges faced in various fields Self contained reference to machine learning Emphasis on applications oriented techniques

Towards Integrative Machine Learning and Knowledge Extraction Andreas Holzinger, Randy Goebel, Massimo Ferri, Vasile Palade, 2017-10-27 The BIRS Workshop Advances in Interactive Knowledge Discovery and Data Mining in Complex and Big Data Sets 15w2181 held in July 2015 in Banff Canada was dedicated to stimulating a cross domain integrative machine learning approach and appraisal of hot topics toward tackling the grand challenge of reaching a level of useful and useable computational intelligence with a focus on real world problems such as in the health domain This encompasses learning from prior data extracting and discovering knowledge generalizing the results fighting the curse of dimensionality and ultimately disentangling the underlying explanatory factors in complex data i e to make sense of data

within the context of the application domain The workshop aimed to contribute advancements in promising novel areas such as at the intersection of machine learning and topological data analysis History has shown that most often the overlapping areas at intersections of seemingly disparate fields are key for the stimulation of new insights and further advances This is particularly true for the extremely broad field of machine learning

The Nature of Statistical Learning Theory Vladimir N. Vapnik, 2013-04-17 The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization It considers learning from the general point of view of function estimation based on empirical data Omitting proofs and technical details, the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics These include the general setting of learning problems and the general model of minimizing the risk functional from empirical data, a comprehensive analysis of the empirical risk minimization principle, and shows how this allows for the construction of necessary and sufficient conditions for consistency, non-asymptotic bounds for the risk achieved using the empirical risk minimization principle, principles for controlling the generalization ability of learning machines using small sample sizes, introducing a new type of universal learning machine that controls the generalization ability
