National Security in the Information Age, 1996 **The Ethics of Information Warfare** Luciano

Floridi, Mariarosaria Taddeo, 2014-03-25 This book offers an overview of the ethical problems posed by Information Warfare and of the different approaches and methods used to solve them in order to provide the reader with a better grasp of the ethical conundrums posed by this new form of warfare The volume is divided into three parts each comprising four chapters The first part focuses on issues pertaining to the concept of Information Warfare and the clarifications that need to be made in order to address its ethical implications The second part collects contributions focusing on Just War Theory and its application to the case of Information Warfare The third part adopts alternative approaches to Just War Theory for analysing the ethical implications of this phenomenon Finally an afterword by Neelie Kroes Vice President of the European Commission and European Digital Agenda Commissioner concludes the volume Her contribution describes the interests and commitments of the European Digital Agenda with respect to research for the development and deployment of robots in various circumstances including warfare **Reorganizing the Joint Chiefs of Staff** Gordon Lederman, 1999-11-30 The Goldwater Nichols Department of Defense Reorganization Act of 1986 is the most important legislation to affecting U S national defense in the last 50 years This act resulted from frustration in Congress and among certain military officers concerning what they believed to be the poor quality of military advice available to civilian decision makers It also derived from the U S military s perceived inability to conduct successful joint or multi service operations The act passes after four years of legislative debate designated the Chairman of the Joint Chiefs of Staff as the principal military advisor to the President and sought to foster greater cooperation among the military services Goldwater Nichols marks the latest attempt to balance competing tendencies within the Department of Defense namely centralization versus decentralization and geographic versus functional distributions of power As a result of the Goldwater Nichols Act the Chairman of the Joint Chiefs has achieved prominence but

his assignment is somewhat contradictory the spokesman and thus the advocate for the Commander in Chief while simultaneously the provider of objective advice to the President While the act did succeed in strengthening the CINCs authority and in contributing to the dramatic U S achievements in the Gulf War the air and ground campaigns revealed weaknesses in the CINCs capability to plan joint operations In addition the increased role of the military in ad hoc peacekeeping operations has challenged the U S military s current organizational structure for the quick deployment of troops from the various services Rapid technological advances and post Cold War strategic uncertainty also complicate the U S military s organizational structure *Strategic Review* ,1997 dedicated to the advancement and understanding of those principles and practices military and political which serve the vital security interests of the United States Health Care, Crime and Regulatory Control Russell G. Smith,1998 Published with the Australian Institute of Criminology Medicine has always been intimately involved with crime and criminology whether it is through explanations of criminal behaviour or the attempt to modify this behaviour through treatment This book looks at the interaction between the criminal justice system and regulating health care practice Covering a variety of disciplines the books addresses regulatory controls and the regulation in health care of alternative health care methods sexual misconduct in health care unlawful killing and fraud

The East Asian Computer Chip War Ming-chin Monique Chu,2013-12-04 The semiconductor industry is a vital industry for military establishments worldwide and the control of or loss of control of this key industry has enormous strategic implications This book focuses on the globalization of the strategic semiconductor industry and the security ramifications of this process It examines in particular the migration of the Taiwanese chip industry to China as part of the globalization of production processes and the extent to which such a globalization process poses security challenges to the United States China and Taiwan Transcending disciplinary boundaries between international political economy security studies and the history of science and technology this multidisciplinary work provides an in depth understanding of the globalization security nexus and disentangles the key policy issues connected to a potential explosive flashpoint in world politics today *Inside the Enemy's Computer* Clement Guitton,2017-08-01 Attribution tracing those responsible for a cyber attack is of primary importance when classifying it as a criminal act an act of war or an act of terrorism Three assumptions dominate current thinking attribution is a technical problem it is unsolvable and it is unique Approaching attribution as a problem forces us to consider it either as solved or unsolved Yet attribution is far more nuanced and is best approached as a process in constant flux driven by judicial and political pressures In the criminal context courts must assess the guilt of criminals mainly based on technical evidence In the national security context decision makers must analyse unreliable and mainly non technical information in order to identify an enemy of the state Attribution in both contexts is political in criminal cases laws reflect society s prevailing norms and powers in national security cases attribution reflects a state s will to maintain increase or assert its power However both processes differ on many levels The constraints which reflect common
