Satellite Communication Systems Design S. Tirró, 2012-12-06 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books more systematic discussion of the subject matter and better readability After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems The book may be divided in five parts as follows The first five chapters provide most of the required background information Chapter 6 is an introductory outline of satellite communication systems Chapters 7 to 13 deal with the various aspects of technical system design Chapter 14 discusses system economics Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications

Mobile Systems Ian Stanley Groves, 2012-12-06 Mobile systems primarily cellular telephony have been the fastest moving telecommunications development to date with a world wide customer base that in the ten or so years to April 1996 reached 100 million and continues with a current growth rate of 60% per annum world wide Predictions suggest that the customer base will exceed 1 billion within the next ten years and that the saturation level is around 80% of any population Faced with such statistics any book such as this can proffer little more than a snapshot of the activities and developments that are at present taking place within the mobile world It can however reflect on some of the underlying principles that support the industry The opening chapter offers a vision for the future of mobile communications that of more mobile than fixed connections to the world s telecommunications networks one which interestingly pre dates the emergence of the information superhighway The Internet whose growth of computer networks has in recent years exceeded that of even mobile systems is demanding ever more bandwidth to support its multimedia applications and access for people on the move The communications needs of the next century customer are the drivers behind the convergence of computing and telecommunications networks the mobile component of which will be realized as Third Generation Mobile Systems fGMS
