Inner Experience and Neuroscience Donald D. Price, James J. Barrell, 2012-08-03 A proposal for merging a science of human consciousness with neuroscience and psychology The study of consciousness has advanced rapidly over the last two decades And yet there is no clear path to creating models for a direct science of human experience or for integrating its insights with those of neuroscience psychology and philosophy In *Inner Experience and Neuroscience* Donald Price and James Barrell show how a science of human experience can be developed through a strategy that integrates experiential paradigms with methods from the natural sciences They argue that the accuracy and results of both psychology and neuroscience would benefit from an experiential perspective and methods Price and Barrell describe phenomenologically based methods for scientific research on human experience as well as their philosophical underpinnings and relate these to empirical results associated with such phenomena as pain and suffering emotions and volition They argue that the methods of psychophysics are critical for integrating experiential and natural sciences describe how qualitative and quantitative methods can be merged and then apply this approach to the phenomena of pain placebo responses and background states of consciousness In the course of their argument they draw on empirical results that include qualitative studies quantitative studies and neuroimaging studies Finally they propose that the integration of experiential and natural science can extend efforts to understand such difficult issues as free will and complex negative emotions including jealousy and greed

Religion, Neuroscience and the Self Patrick McNamara, 2019-12-23 The purpose of this book is to use neuroscience discoveries

concerning religious experiences the Self and personhood to deepen enhance and interrogate the theological and philosophical set of ideas known as Personalism McNamara proposes a new eschatological form of personalism that is consistent with current neuroscience models of relevant brain functions concerning the self and personhood and that can meet the catastrophic challenges of the 21st century Eschatological Personalism rooted in the philosophical tradition of Boston Personalism takes as its starting point the personalist claim that the significance of a self and personality is not fully revealed until it has reached its endpoint but theologically that end point can only occur within the eschatological realm That realm is explored in the book along with implications for personalist theory and ethics Topics covered include the agent intellect dreams and the imagination future orientation and eschatology phenomenology of Time social ethics Love the challenge of AI privacy and solitude and the individual ethic of autarchy This book is an innovative combination of the neuroscientific and theological insights provided by a Personalist viewpoint As such it will be of great interest to scholars of Cognitive Science Theology Religious Studies and the philosophy of the mind *The Survival Hypothesis* Adam J. Rock, 2014-04-30 Contemporary parapsychology tends to be preoccupied with ESP telepathy clairvoyance precognition and psychokinesis In contrast this cutting edge anthology assembles an international team of experts from the fields of psychology parapsychology philosophy anthropology and neuroscience to examine critically what is referred to as the survival hypothesis the tentative statement or prediction that some aspect of our personhood e g consciousness persists subsequent to the death of the physical body The appraisal of the survival hypothesis will be restricted to the phenomenon of mediumship that is humans who ostensibly communicate with the deceased The book has been divided into four main sections Explanation and Belief Culture Psychopathology and Psychotherapy Empirical Approaches The Present and Future The issue of postmortem survival is supremely relevant to us all because the human encounter with death is of course a certainty **Proceedings and Addresses of the American Philosophical Association** American Philosophical Association, 2012 List of members in v 1 **Musical Sense-Making** Mark Reybrouck, 2020-11-29 Musical Sense Making Enaction Experience and Computation broadens the scope of musical sense making from a disembodied cognitivist approach to an experiential approach Revolving around the definition of music as a temporal and sounding art it argues for an interactional and experiential approach that brings together the richness of sensory experience and principles of cognitive economy Starting from the major distinction between in time and outside of time processing of the sounds this volume provides a conceptual and operational framework for dealing with sounds in a real time listening situation relying heavily on the theoretical groundings of ecology cybernetics and systems theory and stressing the role of epistemic interactions with the sounds These interactions are considered from different perspectives bringing together insights from previous theoretical groundings and more recent empirical research The author's findings are framed within the context of the broader field of enactive and embodied cognition recent action and perception studies and the emerging field of neurophenomenology and

dynamical systems theory This volume will particularly appeal to scholars and researchers interested in the intersection between music philosophy and or psychology Inner experience and neuroscience Matthieu Ricard, **Brain and the Inner World** Mark Solms, Oliver Turnbull, 2010-09-07 About this Book The Brain and the Inner World is an eagerly awaited account of a momentous revolution Subjective mental states like consciousness emotion and dreaming were once confined to the realm of philosophy psychoanalysis and the human sciences These topics now assume center stage in leading neuroscientific laboratories around the world This shift has produced an explosion of new insights into the natural laws that govern our inner life By two pioneers in the field The Brain and the Inner World guides us through the exciting new discoveries showing how old psychodynamic concepts are being forged into a scientific framework for understanding subjective experience It is not that the mind is reduced to neurobiology Rather thanks to neurobiology we are free to believe in the power of the mind The neurosciences will soon be able to argue with Plato Descartes James Freud and Lacan about the mysterious connections between emotions experience will reason and creativity *The Merging of the Senses* Barry E. Stein, 1993 Feeling & Knowing Antonio Damasio, 2021-10-26 From one of the world's leading neuroscientists a succinct illuminating wholly engaging investigation of how biology neuroscience psychology and artificial intelligence have given us the tools to unlock the mysteries of human consciousness One thrilling insight after another Damasio has succeeded brilliantly in narrowing the gap between body and mind The New York Times Book Review In recent decades many philosophers and cognitive scientists have declared the problem of consciousness unsolvable but Antonio Damasio is convinced that recent findings across multiple scientific disciplines have given us a way to understand consciousness and its significance for human life In the forty eight brief chapters of Feeling Knowing and in writing that remains faithful to our intuitive sense of what feeling and experiencing are about Damasio helps us understand why being conscious is not the same as sensing why nervous systems are essential for the development of feelings and why feeling opens the way to consciousness writ large He combines the latest discoveries in various sciences with philosophy and discusses his original research which has transformed our understanding of the brain and human behavior Here is an indispensable guide to understanding how we experience the world within and around us and find our place in the universe *The Right Brain and the Unconscious* Dr. R. Joseph, 2001-10-19 This breakthrough book presents for the first time the scientific underpinnings of the unconscious Whereas clinical psychologists embrace the world of the mind and neuroscientists examine the physiology of the brain neither approach alone can adequately explain the magnificent nuances of this remarkable organ or the realm of the unconscious Here Dr Joseph an internationally recognized expert in the fields of both neuroscience and clinical psychology weds these two seemingly disparate disciplines into one generating one of the most astonishing books of our time He offers compelling stories that show the extent to which humans are unaware of the intense power of our right brains and limbic systems Although our left brain devises seemingly rational reasons for our choices and behavior most of us have barely

any conception of the stranger that lurks within our right brain When we humans select a mate or act in a self defeating manner at work or at home what forces are truly at play Why are so many people stunned that they repeatedly end up in destructive relationships According to Dr Joseph the experiences of our childhood are etched onto the very circuitry of our brains and can profoundly influence our decisions on an unconscious level for the rest of our lives He explicates how our inner Child Parent and Adult struggle to gain mastery of our choices He further demonstrates how these inner forces trigger our defense mechanisms keeping us in the dark about our true motivations The revelations of this book will forever change the course of clinical psychology and neuropsychology By merging clinical psychology and neuroscience two antagonistic yet complementary disciplines Dr Joseph blazes a new path illuminating the most intriguing workings of the deepest recesses of our minds

Inner Presence Antti Revonsuo, 2006 The question of consciousness is perhaps the most significant problem still unsolved by science In Inner Presence Antti Revonsuo proposes a novel approach to the study of consciousness that integrates findings from philosophy psychology and cognitive neuroscience into a coherent theoretical framework Arguing that any fruitful scientific approach to the problem must consider both the subjective psychological reality of consciousness and the objective neurobiological reality Revonsuo proposes that the best strategy for discovering the connection between these two realities is one of biological realism using tools of the empirical biological sciences This approach which he calls the biological research program provides a theoretical and philosophical foundation that contemporary study of consciousness lacks Revonsuo coins the term world simulation metaphor and uses this metaphor to develop a powerful way of thinking about consciousness as a biological system in the brain This leads him to propose that the dreaming brain and visual consciousness are ideal model systems for empirical consciousness research He offers a comprehensive overview and critical analysis of consciousness research and defends his approach against currently popular philosophical views in particular against approaches that deny or externalize phenomenal consciousness or claim that brain activity is not sufficient for consciousness He systematically examines the principal issues in the science of consciousness the contents of consciousness the unity of consciousness and the binding problem the explanatory gap and the neural correlates of consciousness and the causal powers and function of consciousness Revonsuo draws together empirical data from a wide variety of sources including dream research brain imaging neuropsychology and evolutionary psychology into the theoretical framework of the biological research program thus pointing the way toward a unified biological science of consciousness Applying imaginative thought experiments Inner Presence reaches beyond the current state of the art revealing how the problem of consciousness may eventually be solved by future science
