Advances in Computers Marvin Zelkowitz, 2005 The term computation gap has been defined as the difference between the computational power

demanded by the application domain and the computational power of the underlying computer platform Traditionally closing the computation gap has been one of the major and fundamental tasks of computer architects However as technology advances and computers become more pervasive in the society the domain of computer architecture has been extended The scope of research in the computer architecture is no longer restricted to the computer hardware and organization issues A wide spectrum of topics ranging from algorithm design to power management is becoming part of the computer architecture Based on the aforementioned trend and to reflect recent research efforts attempts were made to select a collection of articles that covers different aspects of contemporary computer architecture design This volume of the *Advances in Computers* contains six chapters on different aspects of computer architecture Key features Wide range of research topics Coverage of new topics such as power management Network on Chip Load balancing in distributed systems and pervasive computing Simple writing style

Communicating Pictures David Bull, 2014-07-19 *Communicating Pictures* starts with a unique historical perspective of the role of images in communications and then builds on this to explain the applications and requirements of a modern video coding system It draws on the author's extensive academic and professional experience of signal processing and video coding to deliver a text that is algorithmically rigorous yet accessible relevant to modern standards and practical It offers a thorough grounding in visual perception and demonstrates how modern image and video compression methods can be designed in order to meet the rate quality performance levels demanded by today's applications networks and users With this book you will learn Practical issues when implementing a codec such as picture boundary extension and complexity reduction with

particular emphasis on efficient algorithms for transforms motion estimators and error resilience Conflicts between conventional video compression based on variable length coding and spatiotemporal prediction and the requirements for error resilient transmission How to assess the quality of coded images and video content both through subjective trials and by using perceptually optimised objective metrics Features operation and performance of the state of the art High Efficiency Video Coding HEVC standard Covers the basics of video communications and includes a strong grounding in how we perceive images and video and how we can exploit redundancy to reduce bitrate and improve rate distortion performance Gives deep insight into the pitfalls associated with the transmission of real time video over networks wireless and fixed Uses the state of the art video coding standard H 264 AVC as a basis for algorithm development in the context of block based compression Insight into future video coding standards such as the new ISO ITU High Efficiency Video Coding HEVC initiative which extends and generalizes the H 264 AVC approach **Digital Arts** Cat Hope, John Charles Ryan, 2014-06-19

Digital Arts presents an introduction to new media art through key debates and theories The volume begins with the historical contexts of the digital arts discusses contemporary forms and concludes with current and future trends in distribution and archival processes Considering the imperative of artists to adopt new technologies the chapters of the book progressively present a study of the impact of the digital on art as well as the exhibition distribution and archiving of artworks Alongside case studies that illustrate contemporary research in the fields of digital arts reflections and questions provide opportunities for readers to explore relevant terms theories and examples Consistent with the other volumes in the New Media series a bullet point summary and a further reading section enhance the introductory focus of each chapter
