Appropriating Technology Pierre Tchounikine, 2025-10-28 How we use digital technologies and make them our own Appropriation is the process by which we turn digital technologies into instruments for our own use Since we do not use technologies but rather our appropriations of them understanding why and how these appropriations develop is important and useful for both users and for designers However appropriation is an underexplored aspect of human computer interaction In Appropriating Technology

Pierre Tchounikine explains that appropriation is constitutive of how we actually use things in practice and is different in nature from the initial process of learning to use a technology. He provides an analysis of the phenomena at play and explains how the way we develop, we evolve, we learn is key. How our human high level needs also play an important though often unconscious role. How the current adaptation means offered by most technologies give us some degree of freedom to align technologies to our needs and desires although they are far from fully satisfactory and how these design aspects may be improved.

Technology Choices Diane E. Bailey, Paul M. Leonardi, 2015-01-23. An analysis of the occupational factors that shape the technology choices made by people who perform the same type of work. Why do people who perform largely the same type of work make different technology choices in the workplace? An automotive design engineer working in India for example finds advanced information and communication technologies essential allowing him to work with far flung colleagues. A structural engineer in California relies more on paper based technologies for her everyday work and a software engineer in Silicon Valley operates on multiple digital levels simultaneously all day continuing after hours on a company supplied home computer and network connection. In *Technology Choices* Diane Bailey and Paul Leonardi argue that occupational factors rather than personal preference or purely technological concerns strongly shape workers technology choices. Drawing on extensive field work a decade's worth of observations and interviews in seven engineering firms in eight countries Bailey and Leonardi challenge the traditional views of technology choices technological determinism and social constructivism. Their innovative occupational perspective allows them to explore how external forces shape ideas, beliefs and norms in ways that steer individuals to particular technology choices albeit in somewhat predictable and generalizable ways. They examine three relationships at the heart of technology choices: human to technology, technology to technology and human to human. An occupational perspective they argue helps us not only to understand past technology choices but also to predict future ones.

Learning In a Networked Society Yael Kali, Ayelet Baram-Tsabari, Amit M. Schejter, 2019-04-26. One of the most significant developments in contemporary education is the view that knowing and understanding are anchored in cultural practices within communities. This shift coincides with technological advancements that have reoriented end user computer interaction from individual work to communication, participation and collaboration. However while daily interactions are increasingly engulfed in mobile and networked Information and Communication Technologies (ICT) in school learning interactions are in comparison technologically impoverished creating the phenomenon known as the school society digital disconnect. This volume argues that the theoretical and practical tools of scientists in both the social and educational sciences must be brought together in order to examine what types of interaction, knowledge construction, social organization and power structures occur spontaneously in technology enhanced learning (TEL) communities or can be created by design of TEL. This volume seeks to equip scholars and researchers within the fields of education, educational psychology, science, communication, social welfare, information sciences and instructional design as well as practitioners and policy makers with

Venture Labor Gina Neff,2012-04-06 Why employees of pioneering Internet companies chose to invest their time energy hopes and human capital in start up ventures In the dot com boom of the late 1990s employees of Internet startups took risks left well paying jobs for the chance of striking it rich through stock options only to end up unemployed a year later relocated to areas that were epicenters of a booming industry that shortly went bust chose the opportunity to be creative over the stability of a set schedule In *Venture Labor* Gina Neff investigates choices like these made by high tech workers in New York City s Silicon Alley in the 1990s Why did these workers exhibit entrepreneurial behavior in their jobs investing time energy and other personal resources that Neff terms venture labor when they themselves were employees and not entrepreneurs Neff argues that this behavior was part of a broader shift in society in which economic risk shifted away from collective responsibility toward individual responsibility In the new economy risk and reward took the place of job loyalty and the dot com boom helped glorify risks Company flexibility was gained at the expense of employee security Through extensive interviews Neff finds not the triumph of the entrepreneurial spirit but a mixture of motivations and strategies informed variously by bravado na vet and cold calculation She connects these individual choices with larger social and economic structures making it clear that understanding venture labor is of paramount importance for encouraging innovation and even more important for creating sustainable work environments that support workers

Triangles and Tribulations Clay Spinuzzi,2025-06-17 How the sociology of translation can help us understand a social science framework cultural historical activity theory CHAT as a set of uneasy settlements that both further and betray their original intentions How do social science frameworks get taken up and spread In *Triangles and Tribulations* Clay Spinuzzi

uses the sociology of translation to reread the history of one such framework cultural historical activity theory CHAT CHAT originated in the 1920s and 1930s work of Soviet psychologists in the Vygotsky Circle with its key insight mediation depicted in a simple triangular diagram drawn by Lev Vygotsky From there CHAT was developed and popularized by international scholars including Finnish researcher Yrjö Engeström who used Vygotsky's triangle as a basis for his own Through this progressive development CHAT carried on the work of its forebears building on their foundations or so we are sometimes encouraged to understand these transformations But each such translation Spinuzzi argues is also a betrayal Each innovation opens new possibilities for CHAT but also disrupts a previous settlement Examining specific points in CHAT's history Spinuzzi reviews how CHAT has been applied to different domains in service to different projects and evaluated through different trials undergoing rhetorical transformations These translations sedimented as a series of settlements have allowed it to persist as a social science approach and develop as a framework for workplace studies But they have also involved accumulating concepts and terms from various social sciences yielded radical changes in scope and led to ongoing disputes about what constitutes its units of analysis In examining CHAT's triangles Spinuzzi considers how social science frameworks live through practice and dialogue so that they can continue becoming meaningful to others
