Schwartz, 2005-09-30 Children learn mathematics most effectively in contexts that are meaningful to them Realizing the potential of these contexts for fostering young children's mathematical learning while nurturing and challenging them requires knowledge of mathematics as well as of child development Avoiding the debates surrounding hands on learning vs direct instruction the author focuses on the value of different contexts for learning and illustrates ways to genuinely engage children as active learners The work is rich with examples of children's interactions with each other and with adults as they utilize and extend their understanding of mathematics Examples and guidelines for developing lessons and activities will be useful to educators and parents Chapters explore how we underestimate young children's mathematical capabilities how appropriate sequencing of learning and building on prior knowledge will enhance understanding what teachers including parent teachers need to know and high stakes testing This is a work that brings together the connections between knowing the basics and constructing knowledge in accessible and practical ways **ENC Focus**, 2001 **Teaching in the Standards-based Classroom**, 2001 Virtually every national standards document every state framework and every local set of standards calls for fundamental changes in what and how teachers teach The challenge for teachers is to implement the vision for mathematics and science classrooms called for in the standards This issue describes that vision and suggests ways to use the standards mandated in your school to improve your practice to help you teach in your standards based classroom **Math for All** Linda Schulman Dacey, Jayne Bamford Lynch, 2007 Math for All Differentiating Instruction Grades 3-5 is a must read for teachers administrators math coaches special education staff and any other educator who wishes to ensure that all children are successful learners of mathematics This practical research based guide helps teachers understand how decisions to differentiate math instruction are made and how to use pre assessment data to inform their instruction pub desc **Show and Tell** Linda Schulman Dacey, Rebeka Eston, 2002 Talking about numbers Connecting numbers stories and facts Numbers and operations Collecting representing and interpreting data Investigating geometry with pictures and words Sights and sounds of measurement Seeing patterns and sharing algebraic ideas Seeing and hearingng _____ Number Sense Routines Jessica Shumway, 2023-10-10 In this groundbreaking and highly practical book Number Sense Routines Building Numerical Literacy Every Day in Grades K-3 author Jessica Shumway proposes that all children have innate number sense which can be developed through daily exercise Shumway created a series of math routines designed to help young students strengthen and build their facility with numbers These quick 5-10 or 15 minute exercises are easy to implement as an add on to any elementary math curriculum Understanding Number Sense Students with strong number sense understand numbers how to subitize relationships among numbers and number systems They make reasonable estimates compute fluently use

reasoning strategies and use visual models to solve problems Number Sense Routines supports the early learner by instilling the importance of daily warm ups and explains how they benefit developing math minds for long term learning Real Classroom Examples Shumway compiled her classroom observations from around the country She includes conversations among students who practice number sense routines to illustrate them in action how children s number sense develops with daily use and math strategies students learn as they develop their numerical literacy through self paced practice Assessment Strategies Number Sense Routines demonstrates the importance of listening to your students and knowing what to look for Teachers will gain a deeper understanding of the underlying math skills and strategies students learn as they develop numerical literacy Shumway writes As you read you will step into various classrooms and listen in on students conversations which I hope will give you insight into the power of number sense routines and the impact they have on students number sense development My hope is that going into the classroom into students conversations and into their thought processes you will come away with new ideas and tools to use in your own classroom
