Sunkel, 2012-12-06 For more than 100 years the Beilstein Handbook has been publishing checked and evaluated data on  
organic compounds It has become the major reference book for the chemical and physical properties of organic compounds  
The prediction of these physical properties was the subject of the Beilstein workshop The ability to predict physical  
properties is for several reasons of great interest to the Beilstein Institute It is of primary importance to be able to check the  
abstracted data for accuracy and to eliminate simple mistakes like typing errors Presently all the work whether manuscript  
writing or evaluation of data is carried out manually This is very time consuming with the entry of Beilstein into electronic  
data gathering and publication the opportunity for computerized consistency checking has become available Contrary to  
belief when one examines the Beilstein Handbook or Chemical Abstracts there is a dearth of chemical information There are  
a great many compounds but few are well defined resulting in large gaps in the information available to the chemist These  
information gaps could be filled by using algorithmic methods to estimate the properties of interest An important question to  
answer is What is the chemist s reaction to estimated data Will he accept it for use within limits defined by the method or will  
it be unacceptable and therefore detrimental for the data base However if one could partly fill gaps in the data base the  
increase in the power of the search techniques would be marked      *Space Weather Prediction* Takahiro Obara, 2006 Covers
