NIGERIAN ENVIRONMENTAL PROBLEMS

Introduction

Planet Earth is experiencing a climate change emergency of extreme urgency. The production of greenhouse gasses continues to contribute to global warming worldwide nearly twenty years after alarms raised by the scientific community prompted the United Nations Environmental Programme and the World Meteorological Organization to create the Intergovernmental Panel on Climate Change (IPCC) in 1988. Consisting of hundreds of leading scientists from around the world the IPCC predicted catastrophic environmental impacts including rising sea levels, severe cyclones and storms, drought, extremely hot temperatures, increased bushfires, stratospheric ozone loss, serious water supply and agriculture degradation, heat related deaths, spread of diseases, climate refugees and the inability of certain species to cope with increased temperatures, unless a strategy to reduce greenhouse gas emissions by 60% was implemented immediately. Global warming is an issue that transcends the geographical and political boundaries of Nation States and one which requires a cooperative global response if we are to preserve the Earth's atmosphere for future generations. Ten years ago the United Nations Framework Convention on Climate Change (UNFCCC) attempted to secure the commitment of all nations to legally binding emissions targets with the 1997 Kyoto Protocol but in late 2007 an agreement has still not been reached. This demonstrates the ineffectiveness of the current international framework to address issues such as climate change based on the dominance of attitudes rooted in Realism political theory among nation states that favour national interest over international cooperation. The refusal of some of the world's major emitters such as the USA and Australia to ratify the Kyoto Protocol exhibits the Realist traits of governments that prioritise immediate economic security of their nation over transnational co-operation promoted by alternative branches of Liberalism political theory such as Neo-Liberal Institutionalism and Neo-

Angular Correlations in Nuclear Disintegration Hans van Krugten, Bob van Nooijen, 2012-12-06 In 1969 we felt that the subject of angular correlations in nuclear disintegration had received little special attention at international conferences It is true that perturbed angular correlations had been discussed at a small highly specialised meeting at Uppsala in 1963 and that in 1967 certain aspects of perturbed angular correlations had been considered at a conference on hyperfine structure at Asilomar However both conferences were very limited in scope from the point of view of a low energy nuclear physicist Besides since these conferences were being held the field of perturbed angular correlations had received new impetus from the still expanding application of the implantation of radioactive isotopes in suitable environments from the construction of large superconductive magnets etc Meanwhile the technique of measuring correlations between beta particles and circularly polarized gamma rays had been developed to such a degree that they lent themselves to the investigation of beta decay nuclear structure and charge dependence of nuclear forces The systematic study of heavy elements had increased the importance of alpha gamma angular correlations which present their own specific problems Theoretical internal conversion data had become available to such an extent that electron gamma directional correlations became an important tool in the investigation of nuclear structure in a large number of cases it is more advantageous to study electron gamma correlations instead of the commonly measured gamma gamma directional correlations
