How Forests Think Eduardo Kohn, 2013-08-10 Can forests think Do dogs dream In this astonishing book Eduardo Kohn challenges the very foundations of anthropology calling into question our central assumptions about what it means to be human and thus distinct from all other life forms Based on four years of fieldwork among the Runa of Ecuador's Upper Amazon Eduardo Kohn draws on his rich ethnography to explore how Amazonians interact with the many creatures that inhabit one of the world's most complex ecosystems Whether or not we recognize it our anthropological tools hinge on those capacities that make us distinctly human However when we turn our ethnographic attention to how we relate to other kinds of beings these tools which have the effect of divorcing us from the rest of the world break down How Forests Think seizes on this breakdown as an opportunity Avoiding reductionistic solutions and without losing sight of how our lives and those of others are caught up in the moral webs we humans spin this book skillfully fashions new kinds of conceptual tools from the strange and unexpected properties of the living world itself In this groundbreaking work Kohn takes anthropology in a new and exciting direction one that offers a more capacious way to think about the world we share with other kinds of beings

Environmental Law and Governance for the Anthropocene Louis Kotzé, 2017-06-15. The era of eco crises signified by the Anthropocene trope is marked by rapidly intensifying levels of complexity and unevenness which collectively present unique regulatory challenges to environmental law and governance. This volume sets out to address the currently under theorised legal and consequent governance challenges presented by the emergence of the Anthropocene as a possible new geological epoch. While the epoch has yet to be formally confirmed, the trope and discourse of the Anthropocene undoubtedly already confront law and governance scholars with a unique challenge concerning the need to question and ultimately re imagine environmental law and governance interventions in the light of a new socio ecological situation, the signs of which are increasingly apparent and urgent. This volume does not aspire to offer a univocal response to Anthropocene exigencies and phenomena. Any such attempt is in any case unlikely to do justice to the multiple implications and characteristics of Anthropocene forebodings. What it does is to invite an unrivalled group of leading law and governance scholars to reflect upon the Anthropocene and the implications of its discursive formation in an attempt to trace some initial, often radical, future facing and imaginative implications for environmental law and governance.

Interspecies Communication Gavin Steingo, 2024-04-09. In *Interspecies Communication*, ethnomusicologist Gavin Steingo examines several significant cases of attempted communication beyond the human, several cases that is where the dualistic relationship of human to non human is dramatically challenged. Analyzing scenarios including a small coastal community in South Africa where humans call to whales, a scientific laboratory in the Caribbean where humans tried to speak with dolphins, and a case of black performance art involving human alien communication, Steingo charts various mechanisms that humans have devised to think about and indeed to reach beings very unlike ourselves. These speculative endeavors look and listen beyond what we are and what we know. The book focuses on the second half of the twentieth century when Enlightenment conceptualizations of human and non human were increasingly materialized. Following the Second World War, scientists embarked upon the deep exploration of oceans and cosmic space, two realms previously inaccessible to the senses and to empirical investigation. As quintessential

final frontiers the outer space of the cosmos and the inner space of oceans were conceptualized as structurally isomorphic twins subject to the same method of scrutiny Interspecies Communication examines the way that globally circulating ideas are taken up by a range of different subject positions including and especially peripheral subject positions in the global South

Radical Transformation Imants Barušs, 2021-01-28 In Radical Transformation Imants Barušs leads the reader out of the receding materialist paradigm into an emerging post materialist landscape in which new questions present themselves If consciousness has nonlocal properties then how are boundaries between events established If consciousness directly modulates physical manifestation then what is the scope of such modulation If consciousness continues after physical death then how much interference is there from non physical entities As we face the threat of extinction on this planet is there anything in recent consciousness research that can help us Are there effective means of self transformation that can be used to enter persistent transcendent states of consciousness that could resolve existential and global crises The author leads the reader through discussions of meaning radical transformation and subtle activism revealing the unexpected interplay of consciousness and reality along the way

Water and Cognition in Early Modern English Literature Nicholas Helms, Steve Mentz, 2025-10-01 Water and cognition seem unrelated things the one a physical environment and the other an intellectual process The essays in this book show how bringing these two modes together revitalizes our understanding of both Water and especially oceanic spaces have been central to recent trends in the environmental humanities and premodern

ecocriticism Cognition including ideas about the extended mind and distributed cognition has also been important in early modern literary and cultural studies over the past few decades This book aims to think water and cognition as distinct critical modes and also to combine them in what we term watery thinking Water and Cognition brings together cognitive science and ecocriticism to ask how the environment influences how humans think and how they think about thinking The collection explores how water as element as environment and as part of our bodies affects the way early modern and contemporary discourses understand cognition
