Lobotomy Nation Jesper Vaczy Kragh, 2021-10-09. This book tells the story of one of medicine's most infamous treatments: the neurosurgical operation commonly known as lobotomy. Invented by Portuguese neurologist Egas Moniz in 1935, lobotomy or psychosurgery became widely used in a number of countries, including Denmark, where the treatment had a major breakthrough. In fact, evidence suggests that more lobotomies were performed in Denmark than in any other country. However, the reason behind this unofficial world record has not yet been fully understood. Lobotomy Nation traces the history of psychosurgery and its ties to other psychiatric treatments, such as malaria fever therapy, Cardiazol shock, and insulin coma therapy, but it also situates lobotomy within a broader context. The book argues that the rise and fall of

lobotomy is not just a story about psychiatry it is also about society culture and interventions towards vulnerable groups in the 20th century
