

How Do Solar Panels Work?

1

Solar panels capture photons from the sun.

2

The photons knock loose electrons from their atoms within the semiconducting material.

3

Electrons flow into metal plates creating a DC electrical circuit in solar panels.

4

The DC current is converted to AC electricity by the inverter for home and business use.

5

The AC electricity is then sent to a breaker box and distributed to various appliances and devices in the building.

It is used to power lights, electronics, and other household items.
