Cloud Data Management Liang Zhao,Sherif Sakr,Anna Liu,Athman Bouguettaya,2014-07-08 In practice the design and architecture of a cloud varies among cloud providers We present a generic evaluation framework for the performance availability and reliability characteristics of various cloud platforms We describe a generic benchmark architecture for cloud databases specifically NoSQL database as a service It measures the performance of replication delay and monetary cost Service Level Agreements SLA represent the contract which captures the agreed upon guarantees between a service provider and its customers The specifications of existing service level agreements SLA for cloud services are not designed to flexibly handle even relatively straightforward performance and technical requirements of consumer applications We present a novel approach for SLA based management of cloud hosted databases from the consumer perspective and an end to end framework for consumer centric SLA management of cloud hosted databases The framework facilitates adaptive and dynamic provisioning of the database tier of the software applications based on application defined policies for satisfying their own SLA performance requirements avoiding the cost of any SLA violation and controlling the monetary cost of the allocated computing resources In this framework the SLA of the consumer applications are declaratively defined in terms of goals which are subjected to a number of constraints that are specific to the application requirements The framework continuously monitors the application defined

SLA and automatically triggers the execution of necessary corrective actions scaling out in the database tier when required The framework is database platform agnostic uses virtualization based database replication mechanisms and requires zero source code changes of the cloud hosted software applications
