Genetics Fundamentals Notes Debasish Kar, Sagartirtha Sarkar, 2022-10-06 This up to date and comprehensive textbook is essential reading material for advanced undergraduate and graduate students with a course module in genetics and developmental biology. The book provides clear, concise and rigorous foundational concepts of genetics. It opens with an introductory chapter that provides an overview of genetics. The book includes separate and detailed sections on classical genetics, molecular genetics and population genetics. It covers basic and foundational principles such as Mendelian genetics, chromosomal theory, transcription, translation, mutation and gene regulation. It further includes chapters on advanced topics such as molecular genetic techniques, genomics and applied molecular genetics. The concluding section includes chapters on population genetics, developmental genetics and evolutionary genetics. The chapters are written by authors with in-depth knowledge of the field. The book is replete with interesting examples, case studies, questions and suggested reading. It is useful to students and course instructors in the field of human genetics, developmental biology, life sciences and biotechnology. It is also meant for researchers who wish to further their understanding about the fundamental concepts of genetics.

**Therapeutic Progress in Oncology** Jacques Barbet, Adrien Fouquier, Yves Thomas, 2020-02-19 The combined effects of population growth and aging have led to an increase in the number of cancers. Preventing, diagnosing, treating and curing cancer are therefore more than ever imperatives facing medicine, especially to continue the decrease in cancers' mortality rates and to improve the quality of survival. Over time, the classic modes of treatment: surgery, external beam radiotherapy, chemotherapy, have become more refined and efficient. From the beginning of this century, new therapeutic options have been developed: targeted cancer therapy, targeted radionuclide therapy and immunologic therapies based on monoclonal antibodies, cellular therapy and vaccinations. Artificial intelligence and machine learning are also being introduced to the field of oncology. Starting with the basic scientific principles relevant to oncology, this book explains and makes these concepts and innovations accessible to a wide audience, especially in the interest of patients. It also contributes to the oncological field of 4P medicine, with 4P standing for predictive, preventive, personalized and participative. *Biomaterials Science and Tissue Engineering* Bikramjit Basu, 2017-09-15 Covers key principles and methodologies of biomaterials science and tissue engineering with the help of numerous case studies. **Precision Medicine in Cancers and Non-Communicable**
