Longitudinal Structural Equation Modeling Jason T. Newsom, 2023-10-31 Longitudinal Structural Equation Modeling is a comprehensive resource that reviews structural equation modeling SEM strategies for longitudinal data to help readers determine which modeling options are available for which hypotheses This accessibly written book explores a range of models from basic to sophisticated including the statistical and conceptual underpinnings that are the

building blocks of the analyses By exploring connections between models it demonstrates how SEM is related to other longitudinal data techniques and shows when to choose one analysis over another Newsom emphasizes concepts and practical guidance for applied research rather than focusing on mathematical proofs and new terms are highlighted and defined in the glossary Figures are included for every model along with detailed discussions of model specification and implementation issues and each chapter also includes examples of each model type descriptions of model extensions comment sections that provide practical guidance and recommended readings Expanded with new and updated material this edition includes many recent developments a new chapter on growth mixture modeling and new examples Ideal for graduate courses on longitudinal data analysis advanced SEM longitudinal SEM and or advanced data quantitative analysis taught in the behavioral social and health sciences this new edition will continue to appeal to researchers in these fields
