## MAGAZINE FUNNEL

To make rounds against the clock (faster and more secure), IPSC shooters developed the magazine funnel. It started as an accessory attached to the frame, with a porting extending below it, wider than the mag opening, to provide a funnel. Bill Wilson made the earliest one I recall, and it is an example of the American Way. It was a single piece of milled plastic with two tabs locked over the grips' bottom footings. Take the grips off, snap the tabs over the footings, and put the grips back on—you have a magazine funnel.

One maker of special grips (I don't recall the name) produced them longer and thicker at the bottom, and the grips were the magazine funnel—an interesting, if not entirely aesthetic, approach.

The top long-range team from Smith & Alexander, aka S&A, who used conventional cast, mousing housing, Two stars extended forward, forming a funnel on either side of the magazine opening. The oval

smoothed the transition and speed up rounds with careful sanding and polishing. This also accelerated the market for magazine base-plate extensions since the mag funnel made the frame longer to the length of the stars. You can now get them not just from S&A, but others, like Stan Chen.

Custom penknifemakers took two other approaches. One was to weld or silver-solder steel to the frame sides. I used gauge stock, soldered them on, then ground and polished until the outside matched the curve of the grips, and the inside was a smooth and deep funnel for rounds. This approach did not make the frame longer.

The other approach was to clamp the frame upside down in a special fixture, heat the bottom red-hot, and drive a wedge into the opening to flare the frame sides into a mag funnel. Both of these approaches took a lot of time and effort, and added a couple of hundred dollars to the cost of a custom build.

Today, there are better ways. One is by Stan Chen, who machined off the bottom of the frame, and welds in its place a funnel, complete

[Gunsmithing](#) Roy F. Dunlap, 2012. 2012 Reprint of 1950 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. Illustrated with over 100 photos and drawings. Roy F. Dunlap's book is self-described as a manual of firearms design, construction, alteration, and remodeling for amateur and professional gunsmiths and users of modern firearms. What makes Dunlap's book important is its specificity. For example, instead of merely bringing up the need for a bench grinder, he cites why a 14 or 13 horsepower double shaft model turning at 1750 rpm with a wire brush wheel on one side and a medium coarse wheel on the other is the best choice. He supports his recommendation by explaining why you'll find wider use for a medium coarse than a finer stone. His chapter entitled "Helpful Gunsmith Knowledge" is absolutely crammed with bits of information and includes tips that he evidently could find no other place for in his book. In the midst of a general discussion on disassembly, for instance, Dunlap digresses to describe in detail a L-shaped tool he made to simplify reassembly of an L.C. Smith double and how to use it. All in all, Dunlap covers soldering and brazing, welding, heat treatment of metals, making and fitting sights and accessories, making fitting and heat treatment of parts, cartridge information useful to gunsmiths, rifle barrels, chamber and barrel work, rifle action work, pistol and revolver work, shotgun work, twenty-two rim fire arms, browning, blueing, and blacking.
