

### Knight-Kit AC-DC "Space" Scanner

**T**HE "Space Spinner" circuit illustrates the versatility and operating convenience that can be built into a simple AC-DC receiver. The basic circuit is the extremely efficient, highly sensitive, regenerative type—similar to that used in the "Ocean Stopper"; but with such added refinements as bandswitching and an added stage of audio amplification.

This receiver will provide excellent reception of broadcast and short-wave transmissions through the built-in speaker or through headphones. It covers the entire broadcast band from 540 to 1700 kilocycles—and by turning the bandswitch to the shortwave position it covers the international and Amateur short-wave bands between 8 and 17 megacycles. These include the 40 and 20 meter Amateur bands, and the 49, 41, 40, 31, 25, 20, and 19 meter international bands. When used with an efficient antenna system, this receiver will bring in stations from "all corners of the earth" with amazing clarity. Local broadcast reception is possible with only a few feet of antenna wire strung around the room.

The filament wiring and power supply of the Space Spanter<sup>®</sup> are conventional. As the total voltage drop of the tubes (wired in series) is only 97.4 volts, a 260 ohm dropping resistor is used to permit operation from a 110-120 volt AC or DC source. A type 35W4 halfwave rectifier is used in the power supply. The large electrolytic capacitors and the filter choke smooth out AC ripples to reduce hum to a minimum.

The type 12AT7 is actually two triode tubes in a single envelope. Except for a common heater, they operate independently of each other. One section functions as a highly efficient regenerative detector, and the other as a high gain stage of audio amplification. Separate antenna coils are used; L-2 for broadcast, and L-1 for shortwave reception. The position of the band switch, S-1, determines which coil is connected in the circuit. Each coil has two separate windings; the "A" section is the grid circuit winding, and the "B" section is the plate circuit winding. The "A" section of the coils with the main and band-switched tuning capacitors make up a "tank" which
