Manufacturing Scheduling Systems Jose M. Framinan,Rainer Leisten,Rubén Ruiz García,2014-02-19 The book is devoted to the problem of manufacturing scheduling which is the efficient allocation of jobs orders over machines resources in a manufacturing facility It offers a comprehensive and integrated perspective on the different aspects required to design and implement systems to efficiently and effectively support manufacturing scheduling decisions Obtaining economic and reliable schedules constitutes the core of excellence in customer service and efficiency in manufacturing operations Therefore scheduling forms an area of vital importance for competition in manufacturing companies However only a fraction of scheduling research has been translated into practice due to several reasons First the inherent complexity of scheduling has led to an excessively fragmented field in which different sub problems and issues are treated in an independent manner as goals themselves therefore lacking a unifying view of the scheduling problem Furthermore mathematical brilliance and elegance has sometimes taken preference over practical general purpose hands on approaches when dealing with these problems Moreover the paucity of research on implementation issues in scheduling has restricted translation of valuable research insights into industry Manufacturing Scheduling Systems An Integrated View on Models Methods and Tools presents the different elements constituting a scheduling system along with an analysis the manufacturing context in which

the scheduling system is to be developed Examples and case studies from real implementations of scheduling systems are presented in order to drive the presentation of the theoretical insights The book is intended for an ample readership including industrial engineering operations post graduate students and researchers business managers and readers seeking an introduction to the field   *Data Mining and Knowledge Discovery Handbook* Oded Maimon,Lior Rokach,2010-09-10 Knowledge Discovery demonstrates intelligent computing at its best and is the most desirable and interesting end product of Information Technology To be able to discover and to extract knowledge from data is a task that many researchers and practitioners are endeavoring to accomplish There is a lot of hidden knowledge waiting to be discovered this is the challenge created by today s abundance of data Data Mining and Knowledge Discovery Handbook Second Edition organizes the most current concepts theories standards methodologies trends challenges and applications of data mining DM and knowledge discovery in databases KDD into a coherent and unified repository This handbook first surveys then provides comprehensive yet concise algorithmic descriptions of methods including classic methods plus the extensions and novel methods developed recently This volume concludes with in depth descriptions of data mining applications in various interdisciplinary industries including finance marketing medicine biology engineering telecommunications software and security Data Mining and Knowledge Discovery Handbook Second Edition is designed for research scientists libraries and advanced level students in computer science and engineering as a reference This handbook is also suitable for professionals in industry for computing applications information systems management and strategic research management   **Hybrid Competitive Learning Method Using the Fireworks Algorithm and Artificial Neural Networks** Fevrier Valdez,Juan Barraza,Patricia Melin,2023-11-25 This book focuses on the fields of neural networks swarm optimization algorithms clustering and fuzzy logic This book describes a hybrid method with three different techniques of intelligence computation neural networks optimization algorithms and fuzzy logic Within the neural network techniques competitive neural networks CNNs are used for the optimization algorithms technique we used the fireworks algorithm FWA and in the area of fuzzy logic the Type 1 Fuzzy Inference Systems T1FIS and the Interval Type 2 Fuzzy Inference Systems IT2FIS were used with their variants of Mamdani and Sugeno type respectively FWA was adapted for data clustering with the goal to help of competitive neural network to find the optimal number of neurons It is important to mention that two variants were applied to the FWA dynamically adjust of parameters with Type 1 Fuzzy Logic FFWA as the first one and Interval Type 2 F2FWA as the second one Subsequently based on the outputs of the CNN and with the goal of classification data we designed Type 1 and Interval Type 2 Fuzzy Inference Systems of Mamdani and Sugeno type This book is intended to be a reference for scientists and engineers interested in applying a different metaheuristic or an artificial neural network in order to solve optimization and applied fuzzy logic techniques for solving problems in clustering and classification data This book is also used as a reference for graduate courses like the following soft computing swarm optimization algorithms clustering data fuzzy classify and
