Logie,Robin G. Morris,2014-06-20 The rapid growth in the numbers of older people worldwide has led to an equally rapid growth in research on the changes across age in cognitive function including the processes of moment to moment cognition known as working memory This book brings together international research leaders who address major questions about how age affects working memory Why is working memory function much better preserved in some people than others In all healthy adults which aspects of working memory are retained in later years and which aspects start declining in early adulthood Can cognitive training help slow cognitive decline with age How are changes in brain structures connectivity and activation patterns related to important changes in working memory function Impairments of cognition and particularly of working memory can be major barriers to

independent living The chapters of this book dispel some popular myths about cognitive ageing while presenting the state of the science on how and why working memory functions as it does throughout the adult lifespan Working Memory and Aging is the first volume to provide an overview of the burgeoning literature on changes in working memory function across healthy and pathological ageing and it will be of great interest to advanced undergraduates postgraduates and researchers in psychology and related subject areas concerned with the effects of human ageing including several areas of medicine

Social Structures, Aging, and Self-Regulation in the Elderly K. Warner Schaie, PhD, Laura L. Carstensen, PhD, 2006-07-06 This collection considers ways in which societal contexts influence aging by influencing self regulatory processes No one doubts that the social contexts in which individuals develop exert strong influence on life trajectories Those born into environments that provide high quality education supportive social relations and economic assets do better in old age than those born into environments bereft of such resources The extent of this influence however is only beginning to be revealed Recent research shows that life experiences influence basic brain structures e g the effect of musical training on neural organization and functions e g inflammatory processes and that social embeddedness may even protect against Alzheimer s disease Similarly education increasingly appears to have a real effect on neural integrity Thus societal contexts may not simply open or close doors for individuals but may influence self regulatory processes at the most basic levels of functioning Although social structures are generally seen as the independent variables that affect individual aging it is also possible to think of a lifetime development of self regulatory processes leading to behaviors in old age that can have impact on and modify societal structures Two parts of this book consider self regulation as the dependent variable asking how social contexts influence cognitive emotional and self regulatory processes The third part reverses the question treating self regulation as the independent variable and retirement and physical health as dependent variables In this part consideration is given to how the effectiveness of self regulation influences physical and economic outcomes in old age
