

CHAPTER 7

7.1) DENSITY OF ORBITALS IN ONE AND TWO DIMENSIONS

(a) In one dimension, $\psi(x) = A \sin(n\pi x/L)$, analogously to (3.58). Here n is an integer. The number of electrons that can be accommodated in the orbitals up to a given quantum number n is $N = 2n$, where the factor 2 arises from the electron spin. The corresponding maximum energy is

$$\epsilon = \frac{\hbar^2}{2m} \left(\frac{n\pi}{L} \right)^2 = \frac{1}{2m} \left(\frac{\pi \hbar N}{2L} \right)^2 ; N = (2L/\pi \hbar) (2m\epsilon)^{1/2} . \quad (S1)$$

If N is the total number of electrons actually present, then ϵ is the Fermi energy ϵ_F . From (S1):

$$\frac{d\epsilon}{\epsilon} = \frac{2dN}{N} , \quad \mathcal{D}_1(\epsilon) = \frac{dN}{d\epsilon} = \frac{N}{2\epsilon} = (L/\pi \hbar) (2m/\epsilon)^{1/2} .$$

(b) In two dimensions, the relation between the number of electrons N and the highest orbital n is

$$N = 2 \times (\pi n^2/4) , \quad n = (2N/\pi)^{1/2} .$$

Therefore

$$\epsilon = \frac{\hbar^2}{2m} \left(\frac{n\pi}{L} \right)^2 = \frac{\pi \hbar^2 N}{mL^2} , \quad N = L^2 m \epsilon / \pi \hbar^2 ,$$

$$\mathcal{D}_2(\epsilon) = \frac{dN}{d\epsilon} = L^2 m / \pi \hbar^2 = Am / \pi \hbar^2 .$$

7.2) ENERGY OF RELATIVISTIC FERMI GAS

(a) With the help of (6) -- $n_F = (3N/\pi)^{1/3}$, which remains valid -- we obtain, with $n = N/L^3$:

$$\epsilon_F = p_F c = (\hbar \pi c / L) n_F = \hbar \pi c (3n/\pi)^{1/3} .$$

Sustainable Solutions for Water Resources James L. Sipes, 2010-03-30 Get the single source solutions guide to the sustainable management of water resources Why is water the environmental issue The answer is simple without it life on this planet could not exist Yet despite this fact reckless consumption practices from a growing population are drying up the Earth's already limited water resources Other factors such as river and lake contamination rising temperatures and disproportionate geographic accessibility further contribute to the fresh water crisis To confront this pressing concern this enlightening guide which covers over twenty case studies offering insights into real world projects uses a holistic integrated approach to illustrate ways to preserve vital water supplies from green design remedies to encouraging greater personal responsibility This book Provides a basic overview of water resources hydrology current problems involving water resources and the potential impact of global warming and climate change Covers watershed planning Best Management Practices and potential design and planning solutions Offers a concise overview of the issues affecting water use and management Includes a full chapter dedicated to planning issues and a full chapter covering site planning design and implementation Sustainable Solutions for Water Resources takes a practical approach to head off a global water catastrophe by offering sensible measures that can be put in place immediately to promote a clean plentiful flow of the Earth's most precious resource

Optical Properties of Solids Mark Fox, 2010-03-26 The second edition of this successful textbook provides an up to date account of the optical physics of solid state materials The basic principles of absorption reflection luminescence and light scattering are covered for a wide range of materials including insulators semiconductors and metals The text starts with a review of classical optics and then moves on to the treatment of optical transition rates by quantum theory In addition to the traditional discussion of crystalline materials glasses and molecular solids are also covered The first edition included a number of subjects that are not normally covered in standard texts notably semiconductor quantum wells molecular materials vibronic solid state lasers and nonlinear optics The basic structure of the second edition is unchanged but all of the chapters have been updated and improved Furthermore a number of important new topics have been added including Optical control of spin Quantum dots Plasmonics Negative refraction Carbon nanostructures graphene nanotubes and fullerenes NV centres in diamond The text is aimed at final year undergraduates masters students and researchers It is mainly written for physicists but might also be useful for electrical engineers materials scientists and physical chemists The topics are written in a clear tutorial style with worked examples chapter summaries and exercises A solutions manual is available on request for instructors

Raiser,2017-11-30 Cities and city regions are undergoing rapid transformation They are prime locations of innovation while at the same time facing growing problems of spatial fragmentation and social exclusion By addressing these problems cities become forerunners for new patterns of governance which include increasingly private actors While research on global cities has focused primarily on the world s leading financial and economic centres comparative research on the changing role of large complex cities in the developing world is less advanced But it is here where public problems are most seriously threatening the cohesion of urban society and where the need for new answers is most urgent Illustrated by in depth examinations of four city regions Shanghai Mumbai Johannesburg and S o Paulo this book readdresses this balance The book revisits the same set of cities from different angles thereby reflecting urban contradictions juxtapositions and disjunctures

The Physics of Solids Eleftherios N. Economou,2010-08-04 Solid State Physics emphasizes a few fundamental principles and extracts from them a wealth of information This approach also unifies an enormous and diverse subject which seems to consist of too many disjoint pieces The book starts with the absolutely minimum of formal tools emphasizes the basic principles and employs physical reasoning a little thinking and imagination to quote R Feynman to obtain results Continuous comparison with experimental data leads naturally to a gradual refinement of the concepts and to more sophisticated methods After the initial overview with an emphasis on the physical concepts and the derivation of results by dimensional analysis The Physics of Solids deals with the Jellium Model JM and the Linear Combination of Atomic Orbitals LCAO approaches to solids and introduces the basic concepts and information regarding metals and semiconductors

Glaser,P. Baveye,2012-12-06 Traditional reliance on chemical analysis to understand the direction and extent of treatment in a bioremediation process has been found to be inadequate Whereas the goal of bioremediation is toxicity reduction few direct reliable measures of this process are as yet available Another area of intense discussion is the assessment of market forces contributing to the acceptability of bioremediation Finally another important component is a series of lectures and lively exchanges devoted to practical applications of different bioremediation technologies The range of subjects covers a wide spectrum encompassing emerging technologies as well as actual full scale operations Examples discussed include landfarming biopiling composting phytoremediation and mycoremediation Each technology is explored for its utility and capability to provide desired treatment goals Advantages and limitations of each technology are discussed The concept of natural attenuation is also critically evaluated since in some cases where time to remediation is not a significant factor it may be an alternative to active
