18. **Efficiency:** "What do you mean efficiency? Efficiency is measured by the ratio of the light energy to the other energy entering the system. In this case, a fluorescent tube in the center of a room with 200 the length of the light reflecting off the ground." Model up to give a 10 percent efficiency in this light system. It is not an exact calculation, but it is a good estimate of the efficiency.

The light originates from the lightguide which already has, at the same time, the function of serving as a support with respect to light to reflect off the inside of an angle within the structure that is placed on the skin.
