INTRODUCTION: The United States Weather Service is a division of the National Oceanic and Atmospheric Administration (NOAA). Data is collected from about 4000 stations in the United States, as well as from foreign countries and from ships at sea. This information is instrumental in systems, early storm warnings, forecasting air traffic, etc. The systems show plots that indicate air synoptic, maps which show areas of potential air weather changes.

Various weather systems conditions, and intensity for different geographic areas of the United States. The National Weather Service Forecast Center in Kansas City, Missouri, produces and maintains forecasts, while hurricanes are directed by the National Hurricane Center in Miami, Florida. In addition to using traditional synoptic maps for forecast, there is also satellite conditions. These systems also employ meteorologists using the NOAA best systems and forecast program.

OBJECTIVE: Analyzing a series of synoptic weather maps with determination that knowledge of a weather system and make a 24-hour prediction for a given location. This will use various factors and a forecast and a forecast for synoptic time observations of these various storms.
