Neurological Differential Diagnosis Roongroj Bhidayasiri, Michael F. X. Waters, Christopher Giza, 2005-07-01

Neurology is primarily characterized by a variety of diseases which seem very similar and are therefore difficult to distinguish between. Skill at differential diagnosis is therefore absolutely paramount. *Neurological Differential Diagnosis* is a streamlined handbook of prioritized differential diagnosis to be used both in clinical practice and for exam review. By presenting differential diagnosis in order of frequency and importance, this book provides a practical handbook for clinicians in training as well as a potential resource for quick board review. Whilst the book covers the most important syndromes and disease entities, readers are referred to other texts for more exhaustive differentials. By limiting differentials in this way to the most likely and most serious diagnoses, the reader can more easily recall relevant disease processes when faced with a particular clinical situation, whether it be a patient in the emergency room or a difficult question on the board examination. The book specifically targets neurology residents and fellows, with overlap to neurosurgery and psychiatry. Internal medicine physicians with an interest in neurological problems and medical students looking for an edge in clinical neuroscience would also benefit from this text. The content is primarily mid-level material in a pedagogic format. In order to organize the student's thought processes, concise tables and line drawing templates are included. The book is organized into broad chapters by type of disorder, and some overlap occurs between particular chapters.

Neurologic Localization and Diagnosis, E-Book Eli E. Zimmerman, Martin A. Samuels, Howard S. Kirshner, Karl E. Misulis, 2022-08-31. Written for a wide range of neurology and non-neurology clinicians and residents. *Neurologic Localization and Diagnosis: Differential Diagnosis by Complaint-Based Approach* is a concise, easy-to-use guide to establishing a neurologic diagnosis. This unique learning resource uses an algorithmic, complaint-based approach to localizing the condition, developing a list of differential diagnoses, and focusing further evaluation on establishing the diagnosis. Leading neurologists provide up-to-date practical guidance for neurology residents, medical students, and neurologists, as well as nurse practitioners, physician assistants, and non-neurology physicians. Offers a comprehensive approach to neurologic diagnosis: essentials of clinical neuroanatomy, localization by dysfunction and anatomy, and diagnosis of suspected disorders. Concentrates on diagnosis by history and examination wherever possible, but also includes use of specific diagnostic tests where needed. Addresses clinical evaluation for the purpose of establishing the diagnosis in the most rapid and efficient method possible.

In addition to those people preparing to take or recertify for the neurology boards, it will also be useful to medical students and residents rotating through neurology or for the generalist with an interest in reviewing neurology.
