Handbook Of Aging And Cognition:

The Handbook of Aging and Cognition Fergus I. M. Craik, Timothy A. Salthouse, 2011-03-15 Cognitive aging is a flourishing area of research. A significant amount of new data, a number of new theoretical notions and many new research issues have been generated in the past ten years. This new edition reviews new findings and theories, enables the reader to assess where the field is today and evaluates its points of growth. The chapters are organized to run from reviews of current work on neuroimaging, neuropsychology, genetics and the concept of brain reserve through the mainstream topics of attention, memory, knowledge and language to a consideration of individual differences and of cognitive aging in a lifespan context. This edition continues to feature the broad range of its predecessors while also providing critical assessments of current theories and findings.

The Handbook of Aging and Cognition Fergus I. M. Craik, Timothy A. Salthouse, 1992 The study of age related changes in cognitive processes is flourishing as never before, making the area an exciting one for a growing number of researchers. In addition, cognitive aging research is moving out from its traditional roots in experimental and developmental psychology, creating increased contact with cognitive neuropsychology and cognitive neuroscience. To reflect these changes in the field, this volume includes chapters on abnormal aging, the neuroscience of aging and applied cognitive psychology along with the core section on basic cognitive processes. While other recent compilations of research in this area have given relatively brief overviews of the literature, the contributors were given space to review each topic in depth, asked to evaluate the field, not simply their own contributions, and to provide critical commentaries from their personal perspectives. Couched most often in terms of cognitive or information processing models, the general perspective of the contributors is a biologically based account of aging. This shared viewpoint gives the volume particular coherence in its treatment of theories and data. Topics covered include age differences in attention, perception, memory, knowledge, representation, reasoning and language as well as their neuropsychological and neurological correlates and practical implications.

[The Cambridge Handbook of Cognitive Aging](#) Ayanna K. Thomas, Angela Gutches, 2020-05-28 Decades of research have demonstrated that normal aging is accompanied by cognitive change. Much of this change has been conceptualized as a decline in function. However, age related changes are not universal and decrements in older adult performance may be moderated by experience, genetics and environmental factors. Cognitive aging research to date has also largely emphasized biological changes in the brain with less evaluation of the range of external contributors to behavioral manifestations of age related decrements in performance. This handbook provides a comprehensive overview of cutting edge cognitive aging research through the lens of a life course perspective that takes into account both behavioral and neural changes. Focusing on the fundamental principles that characterize a life course approach: genetics, early life experiences, motivation, emotion, social contexts and lifestyle interventions, this handbook is an essential resource for researchers in cognition, aging and gerontology.

[Handbook of the Psychology of Aging](#) James E. Birren, K Warner Schaie, Ronald P. Abeles, Margaret Gatz, Timothy A. Salthouse, 2006 The

Handbook of the Psychology of Aging provides a definitive reference source for information on the psychology of adult development and aging It provides comprehensive reviews of research on biological and social influences on behaviour and age related changes in psychological function **Neuropsychology of Memory, Third Edition** Larry R. Aging and Diversity Lisa Wagner, Chandra M Mehrotra, Man Guo, 2025-09-22

Aging and diversity intersect in important ways as individuals from different backgrounds experience aging through distinct lenses shaped by traditions values and beliefs As the older population in the United States is becoming more diverse it is important to understand the characteristics the potential and the needs of this population In this new and fully revised edition of *Aging and Diversity* Lisa S Wagner Chandra Mehrotra and Man Guo address key topics in diversity and aging discussing how the aging experience is affected by not only race and ethnicity but also gender religious affiliation socioeconomic status rural urban community location and sexual orientation and gender identity Taking this broad view of human diversity allows the authors to convey some of the rich complexities facing aging populations complexities that provide both challenges to meet the needs of a diverse population of elders and opportunities to learn how to live in a pluralistic society Wagner Mehrotra and Guo present up to date knowledge and scholarship about aging and diversity in a way that engages readers in active learning placing ongoing emphasis on developing readers knowledge and skills fostering higher order thinking and encouraging exploration of personal values and attitudes

Engaging Older Adults with Modern Technology: Internet Use and Information Access Needs Zheng, Robert Z.,2012-08-31 The study of older adults and internet use has emerged as a specific area of interest which covers a wide range of topics ranging from behaviors of senior adults in information search to attitude toward the internet to the use of the internet for personal and health issues and to cognitive constraints of seniors in Internet use *Engaging Older Adults with Modern Technology Internet Use and Information Access Needs* takes a structured approach to the research in aging and digital technology in which older adults use of internet and other forms of digital technologies is studied through the lenses of cognitive functioning motivation and affordances of new technology This book identifies the role and function of internet and other forms of digital technology in older adult learning It also bridges the theories with practices in older adults internet digital technology use by focusing on effective design and development of internet and other digital technologies for older adults learning This title is targeted towards educators globally with an emphasis on diverse aspects in older adult and internet learning that include learner characteristics cognition design principles and applications

Malamut,2008 Now in its Second Edition this text is the most up to date reference on the evaluation and treatment of neurologic problems in older adults The book is organized so that clinicians can quickly look up either a patient s symptom s or a disease and includes medication charts and diagnostic algorithms Psychosocial issues such as driving and long term care options are also addressed This edition has more information on EMG evoked potentials other clinical neurophysiologic procedures brain imaging PET scans for dementia screening and functional imaging in patients with cognitive changes Updated information on new antiparkinsonian agents and paraneoplastic syndromes is also included

Enduring Questions in Gerontology Debra J. Sheets,Dana Burr Bradley, PhD,Jon Hendricks, PhD,2006 *Enduring Questions in Gerontology* provides a comprehensive perspective on the abiding issues in gerontology Both current and future gerontologists will find

this book useful in examining emerging dilemmas and creating a context for further progress in the field of aging The most creative thinkers contributing to the gerontological literature reflect on their disciplines consider how key questions have emerged review how they have changed in the decades since gerontology entered the fray and speculate what may lie ahead The resulting collection of essays offers a comprehensive perspective on the enduring questions in gerontology and how they have shaped our understanding of differences in the experience of old age Key contributors to this volume include George L Maddox Christine L Fry Steven Austad Kenneth Brummel Smith Manfred Diehl Martha Holstein W Andrew Achenbaum James E Birren As an emerging or seasoned scholar you will find insights into the ways in which each disciplinary focus grapples with societal transitions identifies emerging issues and lays out strategies and salient perspectives for what should come next

Cognitive Neuroscience of Aging Roberto Cabeza, Lars Nyberg, Denise Park, 2009-04-24 Until very recently our knowledge about the neural basis of cognitive aging was based on two disciplines that had very little contact with each other Whereas the neuroscience of aging investigated the effects of aging on the brain independently of age related changes in cognition the cognitive psychology of aging investigated the effects of aging on cognition independently of age related changes in the brain The lack of communication between these two disciplines is currently being addressed by an increasing number of studies that focus on the relationships between cognitive aging and cerebral aging This rapidly growing body of research has come to constitute a new discipline which may be called cognitive neuroscience of aging The goal of Cognitive Neuroscience of Aging is to introduce the reader to this new discipline at a level that is useful to both professionals and students in the domains of cognitive neuroscience cognitive psychology neuroscience neuropsychology neurology and other related areas This book is divided into four main sections The first section describes noninvasive measures of cerebral aging including structural e g volumetric MRI chemical e g dopamine PET electrophysiological e g ERPs and hemodynamic e g fMRI and discusses how they can be linked to behavioral measures of cognitive aging The second section reviews evidence for the effects of aging on neural activity during different cognitive functions including perception and attention imagery working memory long term memory and prospective memory The third section focuses on clinical and applied topics such as the distinction between healthy aging and Alzheimers disease and the use of cognitive training to ameliorate age related cognitive decline The last section describes theories that relate cognitive and cerebral aging including models accounting for functional neuroimaging evidence and models supported by computer simulations Taken together the chapters in this volume provide the first unified and comprehensive overview of the new discipline of cognitive neuroscience of aging
