GETTING TO KNOW YOUR COOL MOISTURE EVAPORATIVE HUMIDIFIER

Invisible moisture

- Evaporative humidification means you will **NOT** see the moisture output.
- With evaporative humidification, a fan pulls dry air from the room through the saturated wicking filter. Moisture from the wicking filter evaporates and is pushed into the room with the help of the fan.
- Evaporative humidification adjusts moisture output to the amount of moisture the air can hold. The drier (less humid) the air in the room, the more moisture the humidifier will add to the air. An evaporative humidifier cannot add more moisture to the room than the air can hold. The amount of moisture the air can hold depends on many factors including relative humidity level, temperature and size of room.

Filter

- A wicking filter is required for this unit to operate (one included)
- The wicking filter will help to capture minerals from your water and will help to prevent white dust (calcium deposits from hard water)
- If you have hard water, you will need to replace your filter more frequently
- See "Caring for your Filter" section for tips on prolonging the life of your wicking filter

Humidity Level

- The ideal indoor humidity level is 40-60%
- Use a Honeywell humidity monitor (HHM10 or H10C) to check your indoor humidity level (not included)
