Official Gazette of the United States Patent and Trademark Office, 1985 **A guide to resource materials, for anti-poverty and community groups, on social analysis and linking practice and policy**, 1998 **Soil Change Guide: Procedures for Soil Survey and Resource Inventory** U.S. Department of Agriculture, 2019-04-06 Many soil properties have changed and can change as a result of management, historical land use, or even natural factors such as drought interacting with land use. National soil survey databases currently include soil property information for the relatively static soil properties such as texture and also for properties affected by management such as soil organic matter. The databases do not, however, distinguish the values of dynamic soil properties, e.g., organic matter, bulk density, infiltration rate, according to their land use, management system, ecological state, or plant community. Dynamic soil properties as defined in this Guide are soil properties that change within the human time scale. Differences that may exist in these properties can affect the performance of the soil. Furthermore, some dynamic soil properties change very little in response to management and disturbances.
