Limits of Computation Bernhard Reus, 2016-03-25 This textbook discusses the most fundamental and puzzling questions about the foundations of computing. In 23 lecture sized chapters it provides an exciting tour through the most important results in the field of computability and time complexity including the Halting Problem, Rice's Theorem, Kleene's Recursion Theorem, the Church-Turing Thesis, Hierarchy Theorems, and Cook-Levin's Theorem. Each chapter contains classroom tested material including examples and exercises. Links between adjacent chapters provide a coherent narrative. Fundamental results are explained lucidly by means of programs written in a simple high level imperative programming language which only requires basic mathematical knowledge. Throughout the book the impact of the presented results on the entire field of computer science is emphasised. Examples range from program analysis to networking, from database programming to popular games and puzzles. Numerous biographical footnotes about the famous scientists who developed the subject are also included. *Limits of Computation* offers a thorough yet accessible introduction to computability and complexity for the computer science student of the 21st century.

Milestones in Analog and Digital Computing Herbert Bruderer, 2021-01-04 This Third Edition is the first English language edition of the award winning *Meilensteine der Rechentechnik* illustrated in full color throughout in two volumes. The Third Edition is devoted to both analog and digital computing devices as well as the world's most magnificent historical automata and select scientific instruments employed in astronomy, surveying, time measurement etc. It also features detailed instructions for analog and digital mechanical calculating machines and instruments and is the only such historical book with comprehensive technical glossaries of terms not found in print or in online dictionaries. The book also includes a very extensive bibliography based on the literature of numerous countries around the world. Meticulously researched, the author conducted a worldwide survey of science technology and art museums with their main holdings of analog and digital calculating and computing machines and devices, historical automata and selected scientific instruments in order to describe a broad range of masterful technical achievements. Also covering the history of mathematics and computer science, this work documents the cultural heritage of technology as well.
