Error codes

PathFinder uses codes numbered from 1 to 499 to facilitate repair.

Codes from 1 to 99 are information codes. They are never stored in the controller memory and so can only be viewed in the [Inputs+Outputs] => [Current Errors].

Codes between 100 and 199 are warning codes. These codes are stored. They do not concern defects that may require a repair; they concern truck servicing (e.g. adjustment of the electromagnetic brake air-gap).

Codes between 200 and 499 are error codes. These codes are split into 3 groups:

- From 200 to 299: fault on a controller input or output (external component faulty, defect in the internal transistor for controlling the output)
- From 300 to 399: fault in the power element of the controller
- From 400 to 499: internal fault between the two microprocessors.

Statuses displayed immediately in "Inputs+Outputs / Current Errors"
